<sup>(1)</sup> Maximum shaft or housing fillet radius that bearing corners will clear.

<sup>(2)</sup> Based on 10<sup>6</sup> revolutions of calculated fatigue life.

# BALL BEARINGS

## HEAVY 7400 SERIES

- Dimensionally interchangeable with the radial 400 Series.
- Sizes with a “WN” suffix include a refined bore diameter tolerance.
- Can sustain heavier thrust and combined loads than the 7300WN Series.
- A single bearing is suggested for applications in which the thrust load is in one direction or, in the case of combined loads, the thrust load is high in relation to the radial load.
- A duplex pair is suggested for applications where thrust is present in both directions or where axial displacement of the shaft must be restricted.
- For exceptionally high thrust loads in one direction, a tandem pair can be used, opposed by a third bearing.
- Sizes with a suffix “W” have a 20 degree contact angle and a steel retainer.
- Sizes with a suffix “PW” have a 35 degree contact angle and a steel retainer.
- Sizes with a “WN” suffix have a 40 degree contact angle and a one-piece, high-strength machined bronze cage.

7405W-7409W  
20° Contact Angle  
7410PW-7420PW  
35° Contact Angle

7412WN and 7415WN MBR  
40° Contact Angle

<sup>(1)</sup> Maximum shaft or housing fillet radius that bearing corners will clear.

<sup>(2)</sup> Based on 10<sup>6</sup> revolutions of calculated fatigue life.

### LIGHT 5200 SERIES

- Features the same bores and outside diameters as the corresponding bearings in the 200 Series single-row radial type.
- Double-row angular contact ball bearings meet the demand for increased axial and radial rigidity in applications where the design limits space.
- Available in both Conrad and maximum capacity types.
- Suffix "K" denotes Conrad (example: 5203K).
- Suffix "W" or no suffix denotes maximum capacity type (example: 5212W, 5213).
- Please note: these double-row series bearings are not prelubricated.

(1) Maximum shaft or housing fillet radius that bearing corners will clear.  
 (2) Sizes have PRB molded nylon retainers.  
 (3) These sizes have contact angle converging inside the bearing.  
 (4) Width tolerance is +.00 mm to -.15 mm (+.000 to -.006").  
 (5) Width tolerance is +.00 mm to -.20 mm (+.000 to -.008").  
 (6) Based on 10<sup>6</sup> revolutions of calculated fatigue life.

**Note:** See page D45 for Shield and Snap Ring Combinations.

# BALL BEARINGS

## MEDIUM 5300 SERIES

- Features the same bores and outside diameters as corresponding bearings in the 300 Series single-row radial type.
- Double-row angular contact ball bearings meet the demand for increased axial and radial rigidity in applications where design limits space.
- Available in Conrad and maximum capacity types.
- Suffix "K" denotes Conrad type (example: 5303K).
- Suffix "W" or no suffix denotes maximum capacity type (examples: 5312W, 5319).
- Please note that these double-row series bearings are not prelubricated.

### DIMENSIONS – TOLERANCES

(1) Maximum shaft or housing fillet radius that bearing corners will clear.  
 (2) Sizes have PRB molded nylon retainers.  
 (3) Width tolerance is +.00 mm to -.15 mm (+.000 to -.006").  
 (4) Width tolerance is +.00 mm to -.20 mm (+.000 to -.008").  
 (5) Width tolerance is +.00 mm to -.25 mm (+.000 to -.010").  
 (6) Based on 10<sup>6</sup> revolutions of calculated fatigue life.

**Note:** See opposite page for shield and snap ring combinations.

(1) The snap ring is normally packaged separately in the box with the bearing.  
 (2) These sizes have contact angle converging inside bearing (30°).  
 (3) Inner ring width is 19.05 mm (.7500").  
 (4) Ring widths are different for these parts. Contact a Timken sales engineer to validate size.

## **BALL BEARINGS**

### **NOTES**

D

## WIDE INNER RING

**Overview:** Wide inner ring ball bearings consist of a single-row ball bearing and an extended inner ring. They carry radial, axial and combination loads. The extended inner ring slips onto the shaft and secures with a locking mechanism.

- **Sizes:** Standard series: 15 mm - 75 mm shaft (0.59 in. - 2.9528 in.).  
Medium and heavy-duty series go larger.
- **Markets:** Agriculture, fans and blowers, food processing and conveyors.
- **Features:** Available with a variety of shaft locking systems: eccentric locking collars, setscrews and concentric locking collars.
- **Benefits:** Designed for ease of mounting and maximum shaft support.

## BALL BEARINGS

### INTRODUCTION

Wide inner ring bearing design for ball bearings that are easily mounted on straight shafts and positioned without shoulders, locknuts or adapters.

The internal bearing construction is basically the same as the deep race, single row radial type with ability to carry radial, thrust and combined loads, while providing low friction qualities. The inner ring is generally extended on both sides of the race to provide additional shaft support, and is locked to the shaft by specially designed setscrews, an eccentric self-locking collar, or a concentric collar. The wide inner ring bearings are also available with cylindrical or spherical outside diameters. The cylindrical or straight O.D. type is used for mounting in straight-bored housings. The spherical O.D. type must be mounted in a corresponding spherical seat and is used to compensate for shaft or housing misalignments.

### WIDE INNER RING BEARINGS WITH ECCENTRIC LOCKING COLLARS

The following series are available with the cam (self-locking) collar.

#### RR SERIES

These bearings feature the flareout, contact type R-Seal which encloses a synthetic rubber impregnated washer between two metal caps. Most sizes incorporate the Shroud-Seal design. R-Seal wide inner ring bearings are available in the following non-relubricatable variations: KR (one seal, cylindrical O.D.), KRR and KRRB (two seals). Relubricatable versions are: G-KRR, G-KRRB and GN-KRRB (heavy-duty).

RR Series

#### LL SERIES

These bearings are dimensionally interchangeable with the RR Series, but have non-contact labyrinth seals and steel cages for low-torque, high speed and higher temperature service (up to 350° F.)

#### RA-RR SERIES

The RA-RR Series features an extended inner ring and self-locking collar for simple and effective shaft retention in a standard series bearing. The positive contact, land-riding R-Seal provides improved protection against the heavy contamination encountered in many applications. All sizes have a heat stabilized, moisture conditioned 6/6 nylon retainer which has proven effective under conditions of misalignment. RA-RR extended inner ring bearings are available as RA-RR (two-seals, straight O.D.) and RA-RRB (two seals, spherical O.D.). Relubricatable versions are GRA-RR and GRA-RRB.

RA-RR Series

#### TRI-PLY-SEAL SERIES

Tri-Ply Seal bearings are designed for environments where severe conditions and moisture are present. The one-piece Tri-Ply Seals incorporate a highly effective seal design molded to an exterior shroud cap. The shroud cap protects the seal lips from fiber wrap and abrasion while enhancing the overall sealing effectiveness of the unit. All units incorporate the self-locking collar and have a nylon retainer. Tri-Ply Seal bearings are available in both a non-relubricatable (KPPB) and relubricatable version (G-KPPB).

Tri-Ply Seal Series

#### EXTERNAL SELF-ALIGNING SERIES

The construction of this series permits the inner assembly, which contains an open type ball bearing with spherical O.D. to align in the seat of the mating outer ring. The seat of this outer ring is matched with the spherical O.D. of the ball bearing outer ring providing unrestricted self-alignment and allowing the inner assembly to become square and true with the shaft. Self-aligning units are available in both standard SM-S or heavy SMN-S Series.

External Self-Aligning Series

D

### RA-DD SERIES BEARINGS

The RA-DD Series bearings are extended inner ring type with cam locking collars. They incorporate two close fitting non-contact grease shields to effectively retain lubricant and provide protection against harmful contaminants. The non-contact metallic shields provide improved high speed and low-torque performance required for high speed printing press applications. The 6/6 molded nylon retainer has proven effective under conditions of misalignment. These bearings are dimensionally interchangeable and have the same load capacities as the RA-RR Series. (Available in 5/8 in. - 1 1/2 in. shaft sizes.)

RA-DD Series

### WIDE INNER RING BEARINGS WITH SETSCREW LOCKING DEVICE

The following series are available with the setscrew locking device with special setscrews that are resistant to loosening during operation.

#### Y SERIES

Full width inner ring Y Series bearings increase shaft support in HVAC, conveyors and other industrial applications. They feature superfinished raceways, grade 10 balls and anti-backout nylon patch setscrews. Flexible 6/6 nylon retainers and land-riding shroud seals also ensure excellent performance. They are factory prelubricated and relubricatable setscrew mounting feature is ideal for reversing applications.

Y Series

#### YA SERIES

The YA Series relubricatable and non-relubricatable bearings are an extended inner ring type with specially designed setscrews. Positive contact land-riding R-Seals provide protection against harmful contaminants and retain lubricant.

Setscrew series bearings are available in both non-relubricatable version YA and relubricatable version GYA-RRB. Both types have nylon retainers.

YA Series

#### ER SERIES

This series offers industry standard mounting dimensions and standard nomenclature for a large variety of sizes of relubricatable, extended inner ring bearings for through-bored housings. All bearings in this series have nylon retainers and are equipped with snap rings, eliminating the need for machining housing shoulders. ER bearings are designed with a unique setscrew locking device that locks bearing to shaft and is resistant to loosening during operation. Positive contact land-riding R-Seals provide protection against harmful contaminants and retain lubricant. All ER bearings are black oxide coated for corrosion resistance. Ideal for low-starting and running torque applications.

ER Series

### WIDE INNER RING BEARINGS WITH CONCENTRIC COLLARS

#### GC SERIES

The GC Series wide inner ring bearings are relubricatable with spherical outside diameters, nylon retainers and shroud seals. The metal shroud maintains tight seal contact against the inner ring and shields the rubber seals from damage due to dirt or fiber wrap. The concentric collar is locked to the shaft by two setscrews, located 120 degrees apart, mated with threaded holes in the collar and drilled holes in the bearing inner ring.

GC Series

#### YM MEDIUM DUTY SERIES

The Timken Medium Duty Series offers reliable performance and extended life for applications which see heavier loads. This series has been designed with a combination of premium features – such as superfinished raceways and a nylon patch setscrew locking device, as an ideal package for demanding conditions. These superior bearing inserts will operate with reduced levels in noise, vibration and friction and are the choice antifriction component for saw and paper mill applications, as well as fan and blower assemblies, food and grain handling and conveyor systems.

YM Series

## BALL BEARINGS

### CAM (SELF-LOCKING) COLLAR

1. Observe cam design of the wide inner ring and self-locking collar.

2. Mate the cam of the collar with the cam of the wide inner ring.

3. Press the locking collar against the wide inner ring and turn in the direction of shaft rotation until tightly engaged.

4. With drift pin in collar hole, strike in direction of shaft rotation to lock.

For stationary shafts and outer ring rotation, turn the collar in opposite direction of rotation.

5. Tighten setscrew in collar.

D

## KR, KRR, KRRB INDUSTRIAL SERIES NON-RELUBRICATABLE TYPES

- Designed for extremely dirty or wet conditions.
- Feature R-Seals with flared lips that firmly contact the ground O.D. of the inner ring.
- R-Seals provide a positive seal against dirt and other contaminants while effectively retaining the lubricant.
- Equipped with Shroud-Seals, providing extra effectiveness and protection.
- Extra-wide design provides additional shaft support and extra-large grease capacity.

**Suggested shaft tolerances:** 1/2" - 1 15/16", nominal to -.013 mm, -.0005";  
2" - 2 15/16", nominal to -.025 mm, -.0010".

<sup>(1)</sup> Bore tolerances: 1/2" - 2 3/16" nominal to .013 mm, +.0005; 2 1/4" - 2 15/16" nominal to +.015 mm, +.0006".

<sup>(2)</sup> Spherical O.D. outer ring width is 18 mm, .709".

<sup>(3)</sup> Spherical O.D. outer ring width is 19 mm, .748".

<sup>(4)</sup> Spherical O.D. outer ring width is 21 mm, .827".

<sup>(5)</sup> Spherical O.D. outer ring width is 22 mm, .866".

<sup>(6)</sup> Available with spherical O.D. To order, add suffix B. Example 1115KRRB.

# BALL BEARINGS

## G-KRR, G-KRRB INDUSTRIAL SERIES RELUBRICATABLE TYPES

- The G-KRR Series wide inner ring bearings are the same as RR Series and have a provision for relubrication.
- Designed for extremely dirty or wet conditions.
- Includes R-Seals with flared lips that firmly contact the ground O.D. of the inner ring. The inner ring provides a positive seal against dust, dirt and other contaminants and effectively retains the lubricant.
- G-KRR Series bearings are equipped with Shroud-Seals, providing extra effectiveness and protection.
- Extra-wide design provides additional shaft support and extra-large grease capacity.

**Suggested shaft tolerances:** 1/2" - 1 15/16", nominal to -.0013 mm, -.0005";  
2" - 2 15/16", nominal to -.025 mm, -.0010".

**TO ORDER, SPECIFY BEARING NUMBER FOLLOWED BY "+ COL". Example: G1010KRRB + COL.**

<sup>(1)</sup> Bore tolerances: 1/2" - 2 3/16", nominal to .013 mm, +.0005".  
2 1/4" - 2 15/16", nominal to .015 mm, +.0006".

<sup>(2)</sup> Spherical O.D. outer ring width is 22 mm, .866".  
<sup>(3)</sup> Spherical O.D. outer ring width is 24 mm, .945".

### GN-KRRB HEAVY SERIES RELUBRICATABLE TYPE

- The heavy series R-Seal bearings are similar to the standard series and designed to withstand continuous, heavy or shock loads.
- This series has heavier section 300 Series bearings. They include a considerably thicker sealing member in the contact-type diaphragm seal.
- The design of the series assures complete retention of the lubricant and positive exclusion of all contaminants.

**Suggested shaft tolerances:** 1 3/16" - 1 15/16", nominal to -.013 mm, -.0005";  
2" - 3 15/16", nominal to -.025 mm, -.0010".

<sup>(1)</sup> Bore tolerances: 1 3/16" - 2 3/16", nominal to .013 mm, +.0005"; 2 1/4" - 3 3/16", nominal to .015 mm, +.0006".

<sup>(2)</sup> Also available with cylindrical O.D. Delete suffix "B". Example: GN108KRR.

# BALL BEARINGS

## RA-RR, RA-RRB STANDARD SERIES NON-RELUBRICATABLE TYPES

- Bearings are an extended inner ring type with self-locking collar.
- Due to the positive contact, the land-riding R-Seal provides improved protection against harmful contaminants and retains lubricant under severe operating conditions.
- RA-RR Series are factory prelubricated and have cylindrical outside diameters.
- RA-RRB Series have spherical outside diameters for use in housings with corresponding spherical inside surfaces to provide unrestricted initial alignment.

**Suggested shaft tolerances:** 1/2" - 1 15/16", nominal to -.0013 mm, -.0005";  
2" - 2 3/16", nominal to -.025 mm, -.0010".

TO ORDER, SPECIFY BEARING NUMBER FOLLOWED BY "+ COL". Example: RA100RRB + COL.

<sup>(1)</sup> Bore tolerance is nominal to .013 mm, +.0005".

<sup>(2)</sup> Spherical O.D. outer ring width is 12 mm, .472".

<sup>(3)</sup> Spherical O.D. outer ring width is 14 mm, .551".

<sup>(4)</sup> Spherical O.D. outer ring width is 21 mm, .827".

### GRA-RR, GRA-RRB STANDARD SERIES RELUBRICATABLE TYPES

- GRA-RR Series bearings are the same as the RA-RR Series and have a provision for relubrication.
- GRA-RR Series have cylindrical outside diameters.
- GRA-RRB have spherical outside diameters

Suggested shaft tolerances:  $1/2'' - 1\ 15/16''$ , nominal to  $-0.13\text{ mm}, -.0005''$ ;  
 $2'' - 2\ 15/16''$ , nominal to  $-0.025\text{ mm}, -.0010''$ .

TO ORDER, SPECIFY BEARING NUMBER FOLLOWED BY "+ COL". Example: GRA100RRB + COL.

<sup>(1)</sup> Bore tolerance is nominal to .013 mm, +.0005".  
<sup>(2)</sup> Spherical O.D. outer ring width is 12 mm, .472".

<sup>(3)</sup> Spherical O.D. outer ring width is 14 mm, .551".  
<sup>(4)</sup> Spherical O.D. outer ring width is 21 mm, .827".

## BALL BEARINGS

### YA-RR, YA-RRB STANDARD SERIES NON-RELUBRICATABLE TYPES

- Bearings are an extended inner ring type and have specially designed setscrews with unique thread form.
- Thread form in both series locks bearing to shaft so they are resistant to loosening during operation.
- A positive contact, land-riding R-Seal provides improved protection against harmful contaminants in both series and retains lubricant under severe operating conditions.
- A 6/6 molded nylon retainer has proved effective under conditions of misalignment.
- YA-RR Series has cylindrical outside diameters.
- YA-RRB Series has spherical outside diameters for use in housings with corresponding spherical inside surfaces. This provides unrestricted initial self-alignment.

**Suggested shaft tolerances:**  $1/2'' - 1\ 15/16''$ , nominal to  $-.013\ \text{mm}$ ,  $-.0005''$ ;  
 $2'' - 2\ 15/16''$ , nominal to  $-.025\ \text{mm}$ ,  $-.0010''$ .

<sup>(1)</sup> Bore tolerance is nominal to  $.013\ \text{mm}$ ,  $+.0005''$ .

<sup>(2)</sup> Spherical O.D. outer ring width is  $12\ \text{mm}$ ,  $.4724''$ .

<sup>(3)</sup> Spherical O.D. outer ring width is  $14\ \text{mm}$ ,  $.5512''$ .

<sup>(4)</sup> YA103RR2 and YA103RRB2 use  $1/4 - 28''$  setscrew.

<sup>(5)</sup> Spherical O.D. outer ring width is  $21\ \text{mm}$ ,  $.8268''$ .

### GYA-RR, GYA-RRB STANDARD SERIES RELUBRICATABLE TYPES

- GYA-RR Series bearings are dimensionally interchangeable with the YA-RR Series.
- Both series have cylindrical outside diameters and can be used in standard cylindrical housings.
- GYA-RRB Series have spherical outside diameters, providing unrestricted initial alignment. This series is used in housings with corresponding spherical inside surfaces.

**Suggested shaft tolerances:** 1/2" - 1 15/16", nominal to **-.013 mm, -.0005"**;  
2" - 2 15/16", nominal to **-.025 mm, -.0010"**.

<sup>(1)</sup> Bore tolerance is nominal to .013 mm, +.0005".  
<sup>(2)</sup> GYA103RR2 and GYA103RRB2 use 1/4 - 28" setscrew.

## BALL BEARINGS

### RAL-NPPB STANDARD SERIES NON-RELUBRICATABLE TYPES

- RAL Series are high-quality, compact, low-cost bearings and are intended for use in lightly loaded applications.
- RAL Series are extended inner ring type with self-locking collars.
- Prelubricated RAL Series incorporate the positive contact, land-riding R-Seal. The seal has proved effective in the retention of lubricants and exclusion of foreign matter under extreme service conditions.
- RAL-NPPD Series bearings have spherical outside diameters providing unrestricted initial alignment.
- Used in housings with corresponding spherical inside surfaces.

Suggested shaft tolerances:  $1/2'' - 1 1/4''$ , nominal to  $-.013$  mm,  $-.0005''$ .

TO ORDER, SPECIFY BEARING NUMBER FOLLOWED BY "+ COL". Example: RAL100NPPB + COL.

<sup>(1)</sup> Also available with cylindrical O.D. (Delete suffix "B").

<sup>(2)</sup> Bore tolerance is nominal to .013 mm,  $+.0005''$ .

### KL, KLB, KLL, KLLB SPECIAL SERIES NON-RELUBRICATABLE TYPES

- These wide inner ring ball bearings have either one or two Mechani-Seals.
- Types KLB and KLLB have spherical outside diameters permitting self-alignment when mounted in a housing with a corresponding spherical seat.
- All four types are prelubricated at the factory and require no further lubrication.
- Suitable for higher speed and/or higher temperature applications.
- Because they incorporate non-contact seals, these bearings have very low rotational torque.

**Suggested shaft tolerances:** 1/2" - 1 15/16", nominal to -.013 mm, -.0005";  
2" - 2 15/16", nominal to -.025 mm, -.0010".

(1) Spherical O.D. outer ring width is 18 mm, .7087".  
 (2) Spherical O.D. outer ring width is 19 mm, .7480".  
 (3) Spherical O.D. outer ring width is 21 mm, .8268".  
 (4) Bore tolerance: 1/2" - 2 3/16", nominal to .013 mm, +.0005".  
 2 7/16" - 2 15/16", nominal to .015 mm, +.0006".

## BALL BEARINGS

### G-KLL, G-KLLB SPECIAL SERIES RELUBRICATABLE TYPE

- These wide inner ring ball bearings have two Mechani-Seals and a provision for relubrication.
- Type G-KLL has a cylindrical outside diameter
- Type G-KLLB has a spherical outside diameter.
- Both are generally suitable for higher speed and/or higher temperature applications.
- Because they incorporate non-contact seals, these bearings have very low rotational torque.
- Consult your Timken representative for suggestions.

**Suggested shaft tolerances:** 1/2" - 1 15/16", nominal to -.013 mm, -.0005";  
2" - 2 15/16", nominal to -.025 mm, -.0010".

<sup>(1)</sup> Bore tolerance: 1/2" - 2 3/16", nominal to .013 mm, +.0005";  
2 1/4" - 2 15/16", nominal to .015 mm, +.0006".

### KLLG SPECIAL SERIES WITH WIRELOC

- KLLG wide inner ring bearings are the same as the KLL Type, except for a snap ring or Wireloc in the outer ring.
- The Wireloc mounting provides a convenient method of positively locating a bearing axially.

Suggested shaft tolerances:  $\frac{1}{2}'' - 1\frac{15}{16}''$ , nominal to  $-.013$  mm,  $-.0005''$ ;  
 $2'' - 2\frac{7}{16}''$ , nominal to  $-.025$  mm,  $-.0010''$ .

TO ORDER, SPECIFY BEARING NUMBER FOLLOWED BY "+ COL". Example: 1008KLLG + COL.

<sup>(1)</sup> Bore tolerance:  $\frac{1}{2}'' - 2\frac{3}{16}''$ , nominal to  $.013$  mm,  $+.0005''$ .  
 $2\frac{1}{4}'' - 2\frac{7}{16}''$ , nominal to  $.015$  mm,  $+.0006''$ .

## BALL BEARINGS

### GN-KLLB HEAVY SERIES/SPECIAL DUTY

- The GN-KLLB Series ball bearings are heavy and are similar in design to the standard LL (Mechani-Seal) wide inner ring bearings.
- The GN-KLLB Series have heavier section 300 Series bearings.
- Unlike standard series, the seal in this heavy series is a three-piece construction and includes two fixed inner members and an external rotation slinger.

**Suggested shaft tolerances:**  $1/8'' - 1\ 15/16''$ , nominal to  $-.013\text{ mm}, -.0005''$ ;  
 $2'' - 2\ 15/16''$ , nominal to  $-.025\text{ mm}, -.0010''$ .

<sup>(1)</sup> Bore tolerance:  $1/2'' - 2\ 3/16''$ , nominal to  $.013\text{ mm}, +.0005''$ .  
 $2\ 7/16'' - 2\ 15/16''$ , nominal to  $.015\text{ mm}, +.0006''$ .

### TRI-PLY SEAL INDUSTRIAL SERIES NON-RELUBRICATABLE AND RELUBRICATABLE TYPES

- Tri-Ply Seal bearings are dimensionally interchangeable with KRRB bearings and can be used with standard housings.
- One-piece Tri-Ply Seals incorporate a highly effective seal design molded to an exterior shroud cap. The shroud cap protects the seal lip from fiber wrap and abrasion.
- Supplied with a self-locking collar, the bearings are most effective in environments with severe contamination and moisture.
- Relubricatable Tri-Ply Seal bearings are dimensionally interchangeable with G-KRRB bearings.
- This design can be used with standard housings.

**Suggested shaft tolerances:** a. heavy loads - nominal to **-.025 mm, -.001"**;  
 b. light loads - nominal to **-.050 mm, -.002"**.

<sup>(1)</sup> Bore tolerance: 13/16" - 2 3/16", nominal to .013 mm, +.0005".

<sup>(2)</sup> Applies to relubricatable type only.

**Note:** Suggested max speed - 500 RPM.

## BALL BEARINGS

### GC-KRRB INDUSTRIAL SERIES CONCENTRIC COLLAR RELUBRICATABLE TYPE

- Relubricatable with spherical outside diameters and shroud seals.
- Metal shroud maintains tight seal contact against the inner ring and shields the rubber seals from damage because of dirt or fiber wrap.
- The concentric collar is locked to the shaft by two setscrews located 120 degrees apart, mated with threaded holes in the collar and drilled holes in the bearing inner ring.
- The extra-wide design provides additional shaft support and extra-large grease capacity.

**Suggested shaft tolerances:**  $1/2'' - 1\ 15/16''$ , nominal to  $-.013\text{ mm}, -.0005''$ ;  
 $2'' - 2\ 15/16''$ , nominal to  $-.025\text{ mm}, -.0010''$ .

**TO ORDER, SPECIFY BEARING NUMBER. Example: GC1103KRRB + COL.**

### GY-KRRB SETSCREW INDUSTRIAL SERIES

- The Y-Series setscrew bearing has increased shaft support for HVAC and other industrial applications.
- Featuring superfinished raceways, grade 10 balls and anti-back-out nylon patch setscrews, they are factory prelubricated and are relubricatable.
- Setscrew mounting feature is ideal for reversing load applications.

**Suggested shaft tolerances:** 1/2" - 1 15/16", nominal to -.013 mm, -.0005";  
2" - 2 15/16", nominal to -.025 mm, -.0010".

<sup>(1)</sup> Bore tolerances: 1/2" - 2 3/16", nominal to .013 mm, +.0005".  
2 1/4" - 3 15/16", nominal to .015 mm, +.0006".

## BALL BEARINGS

### MEDIUM-DUTY GYM-KRRB INSERTS SETSCREW LOCK

- This series is designed to offer extended bearing life despite demanding industrial environments.
- Insert features a full width inner ring, providing extra support along the shaft.
- The extra support feature, coupled with a flexible nylon retainer, allows the inserts to operate for extended periods with undersized shafts or in misalignment conditions.
- Inserts are equipped with a three-piece seal, protecting against corrosion, contamination and fiber wrap.
- Inserts also include nylon patch setscrews, resisting setscrew back-out and providing superior holding power in applications with severe vibration.

**Suggested shaft tolerances:** 1" - 1 15/16", nominal to **-.013 mm, -.0005"**;  
2" - 3", nominal to **-.025 mm, -.0010"**.

<sup>(1)</sup> Bore tolerance: 1/2" - 2 3/16", nominal to **.013 mm, +.0005"**;  
2 1/4" - 3 15/16", nominal to **.015 mm, +.0006"**.

## ER INDUSTRIAL SERIES RELUBRICATABLE TYPE

- Designed for use in applications where low starting torque and low running torque are necessary.
- ER-DD Series is for applications where extremely low-torque is required.
- Test results indicate an average of 95 percent reductions in start-up torque when using ER-DD over the standard ER bearing. Running torque is reduced up to 85 - 90 percent.

**Suggested shaft tolerances:**  $\frac{1}{2}'' - 1\frac{15}{16}''$ , nominal to  $-.013$  mm,  $-.0005''$ ;  
 $2'' - 2\frac{15}{16}''$ , nominal to  $-.025$  mm,  $-.0010''$ .

# BALL BEARINGS

## SM INDUSTRIAL SERIES A AND B TYPES/MUA-B INSERTS<sup>(6)</sup>

- Standard SM Series A and B have the same ring tolerances and corner radii as equivalent 200 Series single-row radial ball bearings.
- Type A has cylindrical outside diameters; type B has spherical outside diameters. The letter B appears on the outer ring only.
- Bearings are not prelubricated.

**Suggested shaft tolerances:** 1/2" - 1 15/16", nominal to **-.013 mm, -.0005"**;  
2" - 3 15/16", nominal to **-.025 mm, -.0010"**.

**TO ORDER, SPECIFY BEARING NUMBER FOLLOWED BY "+ COL".**  
Example: SM1207KB + COL.

<sup>(1)</sup> Spherical O.D. outer ring width is 18 mm, .7087".  
<sup>(2)</sup> Spherical O.D. outer ring width is 19 mm, .7480".

<sup>(3)</sup> Spherical O.D. outer ring width is 21 mm, .8268".

<sup>(4)</sup> Bore tolerance: 1/2" - 2 3/16", nominal to .013 mm, +.0005".  
2 1/4" - 3 3/16", nominal to .015 mm, +.0006".  
3 1/4" - 3 15/16", nominal to .018 mm, +.0007".

<sup>(5)</sup> For applications where thrust load exceeds 60% of radial load, consult your Timken representative.

<sup>(6)</sup> See page D140.

<sup>(7)</sup> Order as MUA assembly suggested.

### SMN HEAVY SERIES A AND B TYPES/MUOA-B INSERTS<sup>(4)</sup>

- SMN Series types A and B have the same ring tolerances and corner radii as equivalent 300 Series single-row radial ball bearings.
- Type A has cylindrical outside diameters; Type B has spherical outside diameters. The letter B appears on the outer ring only.
- Bearings are not prelubricated.

**Suggested shaft tolerances:**  $\frac{5}{8}$ " -  $1 \frac{15}{16}$ ", nominal to  $-.013$  mm,  $-.0005$ ";  
 $2 \frac{3}{16}$ " -  $3 \frac{15}{16}$ ", nominal to  $-.025$  mm,  $-.0010$ ".

**For larger sizes, contact your Timken representative.**

**TO ORDER, SPECIFY BEARING NUMBER FOLLOWED BY "+ COL". Example: SMN102K + COL.**

<sup>(1)</sup> Bore tolerance:  $\frac{5}{8}$ " -  $2 \frac{3}{16}$ ", nominal to  $+.013$  mm,  $+.0005$ ".  
 $3 \frac{1}{4}$ " -  $4 \frac{3}{16}$ ", nominal to  $.018$  mm,  $+.0007$ ".  
 $4 \frac{7}{16}$ " -  $4 \frac{15}{16}$ ", nominal to  $.020$  mm,  $+.0008$ ".

<sup>(2)</sup> For applications where thrust load exceeds 60% of radial load, consult your Timken representative.

<sup>(3)</sup> Order as MUOA assembly suggested.

<sup>(4)</sup> See page D140.

# BALL BEARINGS

## SM-S INDUSTRIAL SERIES

- Standard SM-S Series permits the inner assembly to swivel in the outer aligning ring.
- Unrestricted self-alignment is achieved allowing the inner ring to become square and true with the shaft and assembly.
- The external S-Ring is uniquely ground and closely matched to its respective outer bearing ring. The S-Ring of one bearing will not fit the outer ring of another bearing.
- Bearings are not prelubricated.

**Suggested shaft tolerances:** 1" - 1 15/16", nominal to -.013 mm, -.0005";  
2" - 3 15/16", nominal to -.025 mm, -.0010".

**TO ORDER, SPECIFY BEARING NUMBER FOLLOWED BY "+ COL". Example: SM1100KS + COL.**

<sup>(1)</sup> Bore tolerance: 1" - 2 3/16", nominal to .013 mm, +.0005".

2 1/4" - 3 3/16", nominal to .015 mm, +.0006".

3 1/4" - 3 15/16", nominal to .018 mm, +.0007".

<sup>(2)</sup> For applications where thrust load exceeds 60% of radial load, consult your Timken representative.

### SMN-S HEAVY SERIES

- Construction permits inner assembly to swivel in the outer aligning ring.
- Unrestricted self-alignment is achieved, allowing the inner ring to become square and true with the shaft and assembly.
- The external S-Ring is uniquely ground and closely matched to its respective outer bearing ring so that the S-Ring of one bearing will not fit the outer ring of another bearing.
- Has the basic 300 Series load capacities.
- Bearings are not prelubricated.

**Suggested shaft tolerances:** 1 3/16" - 1 15/16", nominal to -.013 mm, -.0005";  
2" - 3 15/16", nominal to -.025 mm, -.0010".

### **NOTES**

D

## HOUSED UNITS

**Overview:** Timken housed units are available in a wide variety of types and sizes to accommodate a complete range of operating conditions.

- **Sizes:** 12.7 mm - 75.4 mm shaft size (0.50 in. - 2.968 in.).
- **Markets:** Agriculture, fans and blowers, food processing and conveyors.
- **Features:** Most popular design features cast iron housing. Other material options include malleable iron, polymer, pressed-steel or rubber.
- **Benefits:** Combines bearing, housing, seal and locking system into one device for easy installation. Operates even when the shaft is not perfectly aligned with the mounting surface.

## BALL BEARINGS

### INTRODUCTION

Ball bearing housed units are available in a wide variety of types and sizes to accommodate a complete range of operating conditions.

These units generally have cast iron housings and are designed for mounting on straight shafts with a slip fit. The self-locking collar and the setscrew inner bearing designs provide ease in mounting. Bolt holes in housings take standard bolts for assembling these units to machinery frames. Several series are also available with the concentric locking collar.

Most units are made with a self-aligning feature, and it is unnecessary for the user to refine the design in excess of practical limits. Units incorporating prelubricated wide inner ring bearings may be furnished without grease fittings.

Several basic types of housed units are available: pillow blocks, flanged cartridges, flangette units, cylindrical cartridges and take-up units. The type required is determined by its application and mounting requirements. Within the basic type selected, variations allow for load factors, shaft sizes, mounting surface dimensions, base to shaft centerline heights and lubrication requirements.

### PILLOW BLOCKS

Pillow blocks, the most commonly used type of mounted units, are designed to provide shaft support where the mounting surface is parallel to the shaft axis. The bolt holes are usually slotted for adjustment during mounting.

Pillow blocks are supplied in a variety of configurations. Pressed steel and rubber pillow blocks are also available for light-duty applications.

### FLANGED CARTRIDGES

Flanged cartridges are used where a shaft passes through the machine frame at a right angle. A four-bolt mounting is the most common, however, where the mounting area is restricted, three- and two-bolt versions are available. A piloted flanged cartridge provides additional mounting accuracy and support.

Flanged cartridges are supplied in both standard and heavy-duty series. Iron and rubber flanged cartridges are also available.

A complete line of flangette units, or pressed-steel flanged cartridges, provides an economical solution to light-duty applications. Two-, three- and four-bolt mountings are available along with a relubricable version.

### CYLINDRICAL CARTRIDGES

Cylindrical cartridges, like flanged cartridges, provide shaft support where the shaft axis is perpendicular to and passing through a machined housing which is generally very thick. The outside diameter of the cylindrical cartridges permits mounting with a press fit into a straight, through-bored housing.

Cylindrical cartridges have a machined spherical bearing seat to provide initial shaft alignment in standard-duty applications. Synthetic, conductive rubber cylindrical cartridges are available for applications where low-cost, light-duty, low-noise operation is essential.

### TAKE-UP UNITS

Take-up units are used where shaft adjustment and belt tightening devices are required, such as conveyor applications. Frames for take-up units provide for either side or top mounting.

Take-up units are available in cast iron for standard-duty and pressed steel for economical, light-duty applications.

D

## TIMKEN SELF-LOCKING COLLAR INSTALLATION

Most Timken housed units come equipped with the self-locking collar to facilitate the mounting of wide inner ring bearings. This self-locking collar eliminates the need for locknuts, washers, shoulders, sleeves, and adapters.

The locking collar has a counterbored recess made purposely eccentric to the bore. The collar recess and the end of the bearing inner ring with which it engages are both machined so that they act as mating cams when on the shaft.

When the collar is engaged to the inner ring, it grips the shaft tightly with a positive binding action that increases with use. No adjustments of any kind are necessary.

1. Slip the shaft through the pillow block or other Timken housed unit incorporating the wide inner ring bearing. Be certain the bearing is aligned in position along the shaft to eliminate any possibility of cramping loads.

2. Fasten the unit securely to the base using the proper bolt size.

3. Place the self-locking collar on the shaft with its cam adjacent to the cam on the end of the bearing's inner ring. The eccentric recessed cam will slide over and engage the corresponding cam on the bearing inner ring. Turn the collar in the direction of shaft rotation.

4. Using a lightweight hammer and a drift pin inserted in the drift pin hole strike in the direction of shaft rotation to positively engage the collar. The wide inner ring is now locked to the shaft.

5. As a final step, fully tighten the setscrew. It exerts a wedging action to hold the collar always in the engaged position, even under shock load. This design will operate effectively after the cams are tightly locked in most cases with no setscrews at all.

D

## CONCENTRIC COLLAR

For simplified installation of Timken housed units equipped with concentric collar bearings, the collar is normally assembled to the wide inner ring for shipment. Slip the complete unit on the shaft following steps 1 and 2 described for the self-locking collar procedure, and tighten both setscrews.

## TIMKEN SETSCREW LOCKING BEARING

Steps 1 and 2 can be repeated from the self-locking collar installation above. To lock the setscrew bearing, simply tighten each inner ring setscrew to the suggested torque listed by shaft size. See chart below.

| Shaft Size (in.) | mm       | SUGGESTED      |            |
|------------------|----------|----------------|------------|
|                  |          | Torque in lbs. | (n • m)    |
| 1/2 - 11/16      | 17 mm    | 35 in lbs.     | 4 (n • m)  |
| 3/4 - 1          | 20-25 mm | 80 in lbs.     | 9 (n • m)  |
| 1 1/16 - 1 3/4   | 30-45 mm | 155 in lbs.    | 18 (n • m) |
| 1 13/16 - 2 3/16 | 50-55 mm | 275 in lbs.    | 31 (n • m) |

It may be necessary to rotate the shaft to provide an easy access of the setscrew wrench to the setscrews. To disassemble, loosen the setscrews.

## BALL BEARINGS

### TIMKEN SURVIVOR™ PT SERIES

Timken's SURVIVOR™ Series housed units have been created to handle stringent food handling requirements and serve in highly corrosive applications. All assembly components have been carefully selected to comply with federal food processing requirements without compromising bearing performance needs.

The patented SURVIVOR PT polymer housed units have been tested to withstand a wide range of highly corrosive chemicals commonly found in food and beverage processing industries. These units are dimensionally stable under load and can operate in continuous temperatures up to 250° F (brief exposure up to 350° F) and the finish will not scrape or flake off during use.

The bearing inserts, given the proprietary Timken thin dense chrome coating, are combined with stainless steel locking collars to provide superior corrosion protection. This coating is a thin, dense chrome coating that will not crack or peel under known application conditions. The bearing housings are available as high-base and low-base pillow blocks, and 2-bolt and 4-bolt flanged cartridges for popular shaft sizes of 3/4 in. through 1 1/2 in. and 20 mm through 40 mm diameters. Bearing inserts are available with the self-locking collar or the setscrew locking device. The SURVIVOR PT assemblies are dimensionally interchangeable with the current line of Timken cast iron housed units.

The SURVIVOR Series provides extraordinary corrosion resistance for food and beverage industries, materials handling operations, dairy and refrigeration applications, as well as HVAC, chemical, maritime and other highly corrosive environments.

All materials used in the SURVIVOR assemblies, including the grease, are approved for USDA and FDA compliant industries.

#### ORDERING INFORMATION

To order complete SURVIVOR polymer assemblies, simply add the "PT" suffix to the current cast iron housed unit designations.

Example:

**YCJT 1 PT or RAK 3/4 PT**

Refer to the corresponding cast iron housing design for dimensional data. Consult your Timken sales representative or an authorized distributor for shaft size availability.

SURVIVOR inserts can be ordered using Timken's standard part number for wide inner ring bearings with a "TDCF" suffix. Example:

**GY1100KRRB TDCF or G1100KRRB + COL TDCF**

#### PT SERIES

| COMPONENT            | MATERIAL         |
|----------------------|------------------|
| Balls                | Stainless Steel  |
| Ball Retainer        | Nylon            |
| Collar               | Stainless Steel  |
| Crush Bushing        | Stainless Steel  |
| Grease               | FDA Approved     |
| Housing              | Polymer          |
| Grease Fitting       | Stainless Steel  |
| Grease Fitting Cover | Nylon            |
| Rings                | TDC plated       |
| Seals                | Synthetic Rubber |
| Seal Caps            | Stainless Steel  |
| Setscrew             | Stainless Steel  |

## TIMKEN SURVIVOR™ NT SERIES

Timken SURVIVOR NT Series is designed to stand up to the demands of the food handling industries and for use in highly corrosive applications. The NT Series provides outstanding protection in combination with thin dense chrome coating ball bearing inserts, collar and the electroless nickel-plated housing.

The SURVIVOR NT Series units are available as high-base and low-base pillow blocks, and 2-bolt and 4-bolt flanged cartridges for popular shaft sizes of 1/2 in. through 2 15/16 in. (and selected metric diameters). Timken also produces a take-up unit in the SURVIVOR NT Series in limited shaft sizes (RTU-NT). The bearing inserts are available with self-locking collars. The SURVIVOR NT Series is dimensionally interchangeable with the current line of Timken cast iron housed units.

The SURVIVOR NT Series provides extraordinary corrosion resistance in a durable package suitable for food and beverage industries, materials handling operations, dairy and refrigeration applications, as well as HVAC, chemical, maritime and other highly corrosive environments.

All materials used in the SURVIVOR assemblies, including the grease, are approved for USDA and FDA compliant industries.

### ORDERING INFORMATION

To order complete SURVIVOR nickel-plated assemblies, simply add the "NT" suffix to the cast iron housed unit designations. Example:

**RCJT 1 NT or RAK 3/4 NT**

Refer to the corresponding cast iron housing design for dimensional data. Consult your Timken sales representative or an authorized distributor for shaft size availability.

SURVIVOR inserts can be ordered using Timken's standard part number for wide inner ring bearings with a "TDCF" suffix. Example:

**G1100KRRB + COL TDCF**

| NT SERIES               |                  |
|-------------------------|------------------|
| COMPONENT               | MATERIAL         |
| Balls                   | Stainless Steel  |
| Ball Retainer           | Nylon            |
| Collar                  | Stainless Steel  |
| Rings                   | TDC plated       |
| Grease                  | FDA Approved     |
| Housing Finish          | Nickel Plating   |
| Grease Fitting          | Stainless Steel  |
| Grease Fitting Cover    | Nylon            |
| Seals                   | Synthetic Rubber |
| Seal Caps               | Stainless Steel  |
| Setscrew <sup>(1)</sup> | Stainless Steel  |

<sup>(1)</sup> Standard SURVIVOR NT units are only available in the "R" series, self-locking collar types. Setscrew lock series ("Y") units are available for minimum quantity orders.

# BALL BEARINGS

## RAK, TAK, LAK INDUSTRIAL SERIES

Timken RAK, TAK and LAK pillow blocks are suggested for industrial applications where normal loads are encountered.

- A compact, one-piece housing that can be mounted in any position.
- Pillow blocks self-align at mounting with the spherical outside diameter of the bearing fitting into corresponding spherical housing seat.
- Units are prelubricated and ready for immediate installation.
- Grease fitting is provided for relubrication.
- Self-locking collars are supplied with all units.
- RAK pillow block is equipped with G-KRRB (R-Seal) wide inner ring bearings, the TAK with G-KPPB (Tri-Ply Seal) wide inner ring bearings and the LAK with the G-KLLB (Mechani-Seal) wide inner ring bearings.
- **Contact a Timken representative to discuss highly corrosive applications (food processing, chemical exposure) where Timken thin dense chrome coated bearings can be utilized.**

**Suggested shaft tolerances:**  $\frac{1}{2}$ " -  $1 \frac{15}{16}$ ", nominal to  $-.013$  mm,  $-.0005$ ";  
 $2$ " -  $2 \frac{15}{16}$ ", nominal to  $-.025$  mm,  $-.0010$ ".

<sup>(1)</sup> Bearing number for RAK is G-KRRB. TAK uses G-KPPB type LAK uses G-KLLB. Note: All units have  $\frac{1}{8}$  pipe thread grease fitting except  $\frac{1}{2}$ - $\frac{11}{16}$  and  $\frac{3}{4}$  units which have  $\frac{1}{4}$ -28 fitting.

**YAK INDUSTRIAL SERIES SETSCREW UNITS**

- Timken Series low-base setscrew pillow blocks feature the GY-KRRB bearing.
- Well-suited for industrial applications with normal loads, due to its full width inner ring setscrew.
- **Contact a Timken representative to discuss highly corrosive applications (food processing, chemical exposure) where Timken thin dense chrome coated bearings can be utilized.**

Suggested shaft tolerances:  $\frac{1}{2}'' - 1 \frac{15}{16}''$ , nominal to  $-.013 \text{ mm}, -.0005''$ ;  
 $2'' - 2 \frac{15}{16}''$ , nominal to  $-.025 \text{ mm}, -.0010''$ .

Shaft diameter with an S = smaller housing.

# BALL BEARINGS

## VAK STANDARD SERIES

- The streamlined and rugged VAK pillow block unit combines engineered housing and RA-RR extended inner ring bearing.
- RA-RR bearing employs a positive contact land-riding seal and a Timken originating self-locking collar. Collar assures positive shaft retention.
- Pillow block can be mounted to operate in any position.
- Bearing housed units are factory prelubricated, but a grease fitting is provided to allow for relubrication if required.

**Suggested shaft tolerances:**  $\frac{1}{2}$ " -  $1 \frac{15}{16}$ ", nominal to  $-.013$  mm,  $-.0005$ ";  
 $2$ " -  $2 \frac{3}{16}$ ", nominal to  $-.025$  mm,  $-.0010$ ".

**Note:** All units have  $\frac{1}{8}$  pipe thread grease fitting except  $\frac{1}{2}$ - $1 \frac{11}{16}$  and  $\frac{3}{4}$  units which have  $\frac{1}{4}$ -28 fitting. Shaft diameter with an S = smaller housing.

# BALL BEARINGS

## RASC INDUSTRIAL SERIES CONCENTRIC COLLAR

- All RASC pillow blocks are equipped with GC-KRRB (R-Seal) wide inner ring bearings with concentric collars.
- Pillow blocks self-align at mounting with the spherical outside diameter of the bearing fitting into a corresponding spherical housing seat.
- Units are prelubricated and ready for immediate installation.
- Grease fitting provides for relubrication if required.
- Concentric collars are supplied with all units.

**Suggested shaft tolerances:** 1/2" - 1 15/16", nominal to **-.013 mm, -.0005"**;  
2" - 2 15/16", nominal to **-.025 mm, -.0010"**.

Note: All units have 1/8 pipe thread grease fitting except RASC 1/2-1 1/16 and 3/4 units which have 1/4-28 fitting.

### YAS INDUSTRIAL SERIES SETSCREW UNITS

- Timken YAS Series high-base, setscrew, pillow blocks feature the GY-KRRB bearing.
- This full-width inner ring setscrew is well-suited for industrial applications involving wet or dirty environments.
- Housing is designed for two-bolt mounting in any position.
- **Contact your Timken representative to discuss highly corrosive applications (food processing, chemical exposure) where Timken thin dense chrome coated bearings can be utilized.**

**Suggested shaft tolerances:** 1/2" to 1 15/16", nominal to **-.013 mm, -.0005"**;  
 2" - 2 15/16", nominal to **-.025 mm, -.0010"**.

Shaft diameter with an S = Smaller housing; Shaft diameter with an H = heavier housing.

# BALL BEARINGS

## VAS STANDARD SERIES

- Timken pillow blocks are similar in design and features, and equal in load-carrying capacity to the VAK Series.
- Slightly different base-to-center height dimension make them interchangeable with certain other competitive designs.
- Units are prelubricated and ready for immediate installation.
- Grease fitting provides for relubrication if required.

**Suggested shaft tolerances:**  $\frac{1}{2}$ " -  $1 \frac{15}{16}$ ", nominal to  $-.013$  mm,  $-.0005$ ";  
 2" -  $2 \frac{3}{16}$ ", nominal to  $-.025$  mm,  $-.0010$ ".

Note: All units have  $\frac{1}{8}$  pipe thread grease fitting except  $\frac{1}{2}$ - $1 \frac{11}{16}$  and  $\frac{3}{4}$  units which have  $\frac{1}{4}$ -28 fitting.

**SAS STANDARD SERIES**

- The SAS is a streamlined and a rugged one-piece pillow block unit that combines the Timken engineered housing and GYA-RRB setscrew bearing.
- GYA-RRB bearing employs a positive contact land-riding seal and specially designed setscrews.
- SAS pillow block can be mounted in and will operate in any position.
- Bearing housed units are factory prelubricated, but a grease fitting is provided to allow for relubrication if required.

**Suggested shaft tolerances:** 1/2" - 1 15/16", nominal to **-.013 mm, *-.0005"***;  
2" - 2 3/16", nominal to **-.025 mm, *-.0010"***.

**Note:** All units have 1/8 pipe thread grease fitting except 1/2-1 1/16 and 3/4 units which have 1/4-28 fitting. Shaft diameter with an S = smaller housing; Shaft diameter with an H = heavier housing.

# BALL BEARINGS

## RAKH INDUSTRIAL SERIES

- Timken pillow blocks are similar in design to other standard series, but have slightly different dimensions to allow interchangeability with competitive designs.
- May be used independently or in connection with RAKHL expansion unit shown below. Used in this capacity, the RAKH pillow blocks provide fixed shaft location while the RAKHL expansion units allows for axial movement. Maximum operating temperature for the RAKH units is 250° F (121° C).
- Units are supplied with self-locking collars.
- **Contact your Timken representative to discuss highly corrosive applications (food processing, chemical exposure) where Timken thin dense chrome coated bearings can be utilized.**

BEARING DATA

| Unit | Bearing Number | Dimensions and Load Ratings |
|------|----------------|-----------------------------|
| RAKH | G-KRRB         | Page D54                    |

Suggested shaft tolerances:  $1\frac{3}{16}'' - 1\frac{15}{16}''$ , nominal to  $-.013$  mm,  $-.0005''$ ;  
 $2'' - 2\frac{15}{16}''$ , nominal to  $-.025$  mm,  $-.0010''$ .

TO ORDER, SPECIFY UNIT AND SHAFT DIAMETER. Example: RAKH 1  $\frac{7}{16}''$ .

<sup>(1)</sup> When used with the expansion unit, specify both units, shaft diameter and suffix.

### RAKHL EXPANSION SERIES

- Designed to allow axial shaft expansion caused by elevated temperatures or other conditions that lead to shaft movement.
- Designed for use with the RAKH pillow blocks.
- RAKH units provide axial shaft location and the RAKHL allows shaft floatation.
- Due to limitations of the lubricant and seal material, the maximum operating temperature for the RAKHL units is 250° F (121° C).
- Units are supplied with self-locking collars.
- Steel “S” ring assures axial expansion.

**Suggested shaft tolerances:** 1 3/16" - 1 15/16", nominal to **-0.013 mm, -0.0005"**;  
2" - 2 15/16", nominal to **-0.025 mm, -0.0010"**.

# BALL BEARINGS

## YASM MEDIUM DUTY SERIES SETSCREW LOCK

- Timken YASM medium-duty pillow blocks feature the GYM-KRRB bearing inserts.
- Ideal for conveyor, fan and blower, sawmill, and feed and grain handling applications.
- Cast iron housings are durable, powder-paint coated and maintain an excellent finish while resisting corrosion, chemicals and weather exposure.
- Incorporates premium features designed to extend bearing life.

**Suggested shaft tolerances:** 1" - 1 15/16", nominal to -.013 mm, -.0005";  
2" - 3", nominal to -.025 mm, -.0010".

### STB SERIES

- STB two-bolt housed units come assembled and ready for mounting.
- Ideal for applications where space is limited, bolt screws are accessed from the bottom of the unit, loads are not severe and reversing moments are not encountered.
- Units are assembled with GYA-RRB bearings with positive contact land-riding seals and setscrew locking.
- Units are factory prelubricated, but a grease fitting is provided for relubrication if required.

# BALL BEARINGS

## VTB SERIES

- VTB two-bolt housed units are nearly identical to the STB unit, except they are assembled with the GRA-RRB bearings and positive contact R-Seals and locking collar.

### RAO, LAO HEAVY SERIES

- Compact, economic, heavy-duty ball bearing housed unit.
- Incorporates the tested and proven features of the Timken standard RAK Series pillow block.
- RAO Series bearings are equipped to handle heavy capacity.
- LAO Series bearings are equipped with heavy series GN-KLLB wide inner ring bearings.
- Units are supplied with a self-locking collar that eliminate shaft shoulders, machining adapters and sleeves, and locknuts that provide easy mounting.

**Suggested shaft tolerances:**     **1 3/16" - 1 15/16", nominal to -.013 mm, -.0005";**  
**2" - 2 15/16", nominal to -.025 mm, -.0010".**

<sup>(1)</sup> LAO assembled with GN-KLLB bearing.

# BALL BEARINGS

## RSA, LSA INDUSTRIAL SERIES

- RSA Series are equipped with G-KRRB wide inner ring ball bearings.
- LSA Series are equipped with G-KLLB wide inner ring bearings.
- Pillow blocks are prelubricated and ready for immediate use.
- Grease fitting is provided for relubrication if required.
- All units are supplied with a self-locking collar.

**Suggested shaft tolerances:** 1/2" - 1 15/16", nominal to -.013 mm, -.0005";  
2" - 3 15/16", nominal to -.025 mm, -.0010".

**RSAO, LSAO HEAVY SERIES**

- RSAO pillow blocks are equipped with GN-KRRB wide inner ring ball bearings.
- LSAO pillow blocks are equipped with GN-KLLB wide inner ring ball bearings.
- Suited for installations where the load is heavy in proportion to the shaft diameter or where considerable shock loads exist.
- For use in wet or extremely dirty conditions.
- Pre-lubricated and ready for immediate use and a grease fitting is provided for relubrication if required.
- All units are supplied with a self-locking collar.

**Suggested shaft tolerances:** 1 1/16", nominal to -.013 mm, -.0005";  
2" - 3 15/16", nominal to -.025 mm, -.0010".

# BALL BEARINGS

## SAL INDUSTRIAL SERIES FIXED & FLOATING TYPES

- Designed for applications where normal to high temperatures are encountered and applications where one or more floating bearing units are required.
- The floating unit allows the bearing to move axially as the shaft expands due to rising temperatures. The fixed unit maintains shaft location.
- Bearings have loose internal fit.
- SAL unit is equipped with a self-aligning SM wide inner ring bearing and a self-locking collar.
- External aligning ring is fitted to the spherical surface of the outer ring.
- Equipped with oil-tight seals. Normally fitted for oil lubrication, but can be equipped for grease lubrication when specified.
- **Before installation, lubricate with high-grade automotive oil, turbine oil, or ball bearing grease.**
- Units are assembled with a spacer ring (fixed type). By removing spacer ring, the assembly becomes a floating unit.

BEARING DATA

| Unit | Bearing Number | Dimensions and Load Ratings |
|------|----------------|-----------------------------|
| SAL  | SM-KS          | Page D72                    |

Suggested shaft tolerances: 1 3/16", - 1 15/16", nominal to -.013 mm, -.0005";  
2" - 3 15/16", nominal to -.025 mm, -.0010".

TO ORDER, SPECIFY UNIT AND SHAFT DIAMETER AND WHETHER FIXED OR FLOATING. Example: SAL 1 7/16" (one fixed, one floating).

### SAOL HEAVY SERIES FIXED & FLOATING TYPES

- Designed for applications with higher than usual temperatures or where one or more floating bearing units are required.
- Floating unit allows the bearing to move axially as the shaft expands due to temperature rise. The fixed unit maintains shaft locations.
- Bearings have loose internal fit.
- SAOL unit is equipped with a self-aligning SMN wide inner ring bearing and a self-locking collar.
- External aligning ring is fitted to the spherical surface of the outer ring.
- Equipped with oil-type seals. Normally fitted for oil lubrication, but can be equipped for grease lubrication when specified.
- **Before installation, lubricate with high-grade automotive oil, turbine oil, or ball bearing grease.**
- Units are assembled with a spacer ring (fixed type). By removing the spacer ring, the assembly becomes a floating unit.

BEARING DATA

| Unit | Bearing Number | Dimensions and Load Ratings |
|------|----------------|-----------------------------|
| SAOL | SMN-KS         | Page D73                    |

**Suggested shaft tolerances:** 1 3/16" - 1 15/16", nominal to -.013 mm, -.0005";  
 2" - 3 15/16", nominal to -.025 mm, -.0010".  
 Larger sizes, consult your Timken representative.

TO ORDER, SPECIFY UNIT AND SHAFT DIAMETER AND WHETHER FIXED OR FLOATING. Example: SAOL 1 7/16" (one fixed, one floating).

<sup>(1)</sup> When four bolts are used, dimension J<sub>1</sub> is distance between centers, and A<sub>1</sub> and T are measured from center of base.

# BALL BEARINGS

## DRNR INDUSTRIAL SERIES

- This rigid double pillow block is designed to provide a sturdy two-bearing mounting for fans and blowers, bench grinders, buffers, vertical shafts and similar heavy-duty applications.
- Compact, one-piece housing is equipped with two wide inner ring bearings with integral R-Seals and self-locking collar.
- Individual grease chambers provided for each bearing.
- Close clearance baffles allow excess grease to work into the center chamber of the housing.
- Grease fittings that take the place of standard pipe plugs provide the means of relubrication.
- Can be mounted in any position, with ample radial and thrust capacity assured at all times.

Suggested shaft tolerances:  $1\frac{5}{16}'' - 1\frac{15}{16}''$ , nominal to  $-.013$  mm,  $-.0005''$ ;  
 $2'' - 2\frac{3}{16}''$ , nominal to  $-.025$  mm,  $-.0010''$ .

**RCJ, TCJ, LCJ INDUSTRIAL SERIES**

- Timken cartridges are used in applications where a minimum amount of machining is to be done.
- Each unit comes assembled and ready for mounting, with bolts through the flange.
- Wide inner ring bearings, self-aligning B-types, which compensate for shaft misalignment.
- RCJ flange cartridge is equipped with G-KRRB (R-Seal) wide inner ring bearings. The TCJ is equipped with G-KPPB (Tri-Ply Seal) wide inner ring bearings. The LCJ is equipped with the G-KLLB (Mechani-Seal) wide inner ring bearings.
- TCJ flange cartridges are identical to RCJ units, except they use the Tri-Ply seal bearing. Tri-Ply units offer the best protection in dirty environments.
- Units are factory prelubricated, but a grease fitting is provided for relubrication if required. Units are supplied with self-locking collars.
- **Contact a Timken representative to discuss highly corrosive applications (food processing, chemical exposure) where Timken thin dense chrome coated bearings can be used.**
- Safety end caps are available for selected sizes.

(1) Bearing number for RCJ is G-KRRB. TCJ uses G-KPPB.  
 (2) Type LCJ uses G-KLLB.

# BALL BEARINGS

## RCJC INDUSTRIAL SERIES CONCENTRIC COLLAR

- The same basic design as the RCJ Series, except a concentric collar is used as the shaft locking device instead of a self-locking cam collar.
- All RCJC units are equipped with GC-KRRB wide inner ring, concentric collar bearings.
- Spherical outside diameter of the bearings mounted in corresponding machined housing seats provides the initial self-alignment.
- Bolt hole spacing dimensions are interchangeable with the RCJ Series and most competitive units.
- Units are factory prelubricated, but a grease fitting is provided for relubrication if required.
- Concentric collars are supplied with all units.
- Safety end caps are available for selected sizes.

**Suggested shaft tolerances:**  $\frac{1}{2}'' - 1 \frac{15}{16}''$ , nominal to  $-.013 \text{ mm}, -.0005''$ ;  
 $2'' - 2 \frac{15}{16}''$ , nominal to  $-.025 \text{ mm}, -.0010''$ .

Shaft diameter with an S = smaller housing.

### YCJ INDUSTRIAL SETSCREW SERIES

- The same basic design as the RCJ Series, except specially designed setscrews are used as the locking device instead of an eccentric collar.
- All units are equipped with GY-KRRB wide inner ring, setscrew bearings.
- Spherical outside diameter of the bearings mounted in the corresponding machined housing seats provides the initial self-alignment.
- Bolt hole spacing dimensions are interchangeable with the RCJ Series and most competitive units.
- Units are factory prelubricated, but a grease fitting is provided for relubrication if required.
- Safety end caps are available for selected sizes.

**Suggested shaft tolerances:** 1/2" - 1 15/16", nominal to -.013 mm, -.0005";  
2" - 2 15/16", nominal to -.025 mm, -.0010".

Shaft diameter with an S = smaller housing.

# BALL BEARINGS

## VCJ STANDARD SERIES

- Flange cartridges come assembled and ready for mounting by using four bolts through the flange.
- VCJ Series flange cartridges are ideal for applications where minimum machining is to be done.
- Units are assembled with GRA-RRB bearings with positive contact land-riding seals and self-locking collars.
- Units are factory prelubricated, but a grease fitting is provided for relubrication if required.
- Safety end caps are available for selected sizes.

**Suggested shaft tolerances:**  $\frac{1}{2}$ " -  $1 \frac{15}{16}$ ", nominal to  $-.013$  mm,  $-.0005$ ";  
 $2$ " -  $2 \frac{3}{16}$ ", nominal to  $.025$  mm,  $-.0010$ ".

Shaft diameter with an S = smaller housing.

### SCJ STANDARD SERIES

- Flange cartridges come assembled and ready for mounting by using four bolts through the flange.
- Ideal for applications where minimum shaft length is required.
- Units are assembled with GYA-RRB bearings with positive contact land-riding seals and setscrew locking.
- Units are factory prelubricated, but a grease fitting is provided for relubrication if required.
- Safety end caps available for selected sizes.

Shaft diameter with an S = smaller housing.

# BALL BEARINGS

## RCJO, LCJO HEAVY SERIES

- Flange cartridges are similar in design to the standard series.
- Ideal for applications where minimum machining is to be done.
- Units come assembled and ready for mounting by using four bolts through the flange.
- RCJO units are assembled with GN-KRRB (R-Seal) wide inner ring bearings. LCJO units are equipped with GN-KLLB (L-Seal) wide inner ring bearings.
- Units are factory prelubricated, but a grease fitting is provided for relubrication if required.
- Units are supplied with self-locking collars and are dimensionally interchangeable.

**Suggested shaft tolerances:** 1 3/16" - 1 15/16", nominal to **-.013 mm, -.0005"**;  
2" - 3 15/16", nominal to **-.025 mm, -.0010"**.

### YCJM MEDIUM DUTY SERIES SETSCREW LOCK

- Four-bolt flanged cartridges featuring GYM-KRRB bearing inserts.
- Ideal for conveyor, fan and blower, sawmill, and feed and grain handling applications.
- Durable, cast iron housings are powder-paint coated and maintain an excellent finish while resisting corrosion, chemicals and weather exposure.
- Industrial-duty flanged cartridges incorporate premium features designed to extend bearing life.

**Suggested shaft tolerances:** 1" -1 15/16", nominal to -.013 mm, -.0005";  
2" - 3", nominal to -.025 mm, -.0010".

## BALL BEARINGS

### YCJTM MEDIUM DUTY SERIES SETSCREW LOCK

- Medium-duty, two-bolt flanged cartridges feature GYM-KRRB bearing inserts.
- Ideal for conveyor, fan and blower, sawmill, and feed and grain handling applications.
- Durable, cast iron housings are powder-paint coated and maintain an excellent finish while resisting corrosion, chemicals and weather exposure.
- Industrial-duty flanged cartridge units incorporate premium features designed to extend bearing life. They can replace competitive designs.

**Suggested shaft tolerances:** 1" - 1 15/16", nominal to -.013 mm, -.0005";  
2" - 3", nominal to -.025 mm, -.0010".

**TO ORDER, SPECIFY UNIT AND SHAFT DIAMETER. Example: YCJTM 1 7/16".**

### RCJT, TCJT, LCJT INDUSTRIAL SERIES

- Cartridges are the same basic design as RCJ, TCJ, and LCJ types, except they have two bolt holes instead of four.
- Primarily designed for applications where the mounting area is restricted.
- RCJT cartridge is equipped with G-KRRB (R-Seal) wide inner ring bearings. The TCJT is equipped with G-KPPB (Tri-Ply Seal) wide inner ring bearings. The LCJT is equipped with the G-KLLB (Mechani-Seal) wide inner ring bearings.
- Units are factory prelubricated, but a grease fitting is provided for relubrication.
- Safety end caps are available for selected sizes.

<sup>(1)</sup> Add C1 suffix to collar numbers for G...KPPB2 bearings (TCJT). Shaft diameter with an S = smaller housing.

## BALL BEARINGS

### RCJTC INDUSTRIAL SERIES CONCENTRIC COLLAR

- Same basic design as RCJT, except they use the concentric collar rather than the self-locking eccentric collar as the shaft locking device.
- All units are equipped with GC-KRRB wide inner ring concentric collars.
- The spherical outside diameter mounted in the corresponding machined housing seats provides the initial self-alignment.
- Bolt hole spacing dimensions are interchangeable with the RCJT Series and most competitive units.
- Units are factory prelubricated. A grease fitting is provided for relubrication.
- Safety end caps are available for selected sizes.

Shaft diameter with an S = smaller housing.

**VCJT STANDARD SERIES**

- Same design and features as the VCJ Type, but has two bolt holes instead of four. This allows for mounting in restricted areas.
- Assembled with GRA-RRB bearings with positive contact land-riding seals and self-locking collars.
- Units are factory prelubricated. A grease fitting is provided for relubrication.
- Safety end caps are available for selected sizes.

Shaft diameter with an S = smaller housing.

# BALL BEARINGS

## YCJT INDUSTRIAL SETSCREW SERIES

- Same design as the YCJ Series, but mounted with two bolts instead of four.
- All are equipped with GY-KRRB wide inner ring, setscrew bearings.
- Spherical outside diameter mounted in the corresponding machined housings seats provides the initial self-alignment.
- Units are factory prelubricated. A grease fitting is provided for relubrication.
- Safety end caps are available for selected sizes.

**Suggested shaft tolerances:** 1/2" - 1 15/16", nominal to **-.013 mm, -.0005"**;  
2" - 3 1/16", nominal to **-.025 mm, -.0010"**.

Shaft diameter with an S = smaller housing.

**SCJT STANDARD SERIES**

- Same construction and design as SCJ Type, but mounted with two bolts instead of four.
- Assembled with GYA-RRB bearings with positive contact land-riding seals and setscrew locking.
- Units are factory prelubricated. A grease fitting is provided for relubrication.

**Suggested shaft tolerances:** 1/2" - 1 15/16", nominal to -.013 mm, -.0005";  
2" - 3 1/16", nominal to -.025 mm, -.0010".

Shaft diameter with an S = smaller housing.

# BALL BEARINGS

## FLCT STANDARD SERIES

- Versatile power transmission units are designed to provide sturdy shaft support in minimum space at minimum cost.
- Space-saving, two-bolt unit mounts flush against the frame.
- Bolt hole spacing and size is the same as the pressed-steel flange unit.
- Equipped with RA-RRB extended inner ring ball bearings with positive contact land-riding seals.
- Permanently prelubricated.
- Positively resistant against contaminants.

Suggested shaft tolerances: nominal to **-.013 mm, -.0005"**.

Shaft diameter with an S = smaller housing.

## RFC INDUSTRIAL PILOTED SERIES CONCENTRIC COLLAR

- Piloted flange cartridges assure accurate mounting fits and provide better support for heavy loads.
- Cast iron units are suited for applications such as material handling, industrial conveyor equipment, and farm and construction equipment.
- Assembled with R-Seal (GC-KRRB) bearings with a concentric locking collar.
- Units are factory prelubricated. A grease fitting is provided for relubrication if required.

**Suggested shaft tolerances:** ½" - 1 15/16", nominal to -.013 mm, .0005";  
2" - 2 3/16", nominal to -.025 mm, -.0010".

Shaft diameter with an S = smaller housing.

# BALL BEARINGS

## GVFD, GVFDR RELUBRICATABLE SERIES - VFD, VFDR NON-RELUBRICATABLE SERIES

- Malleable iron flange cartridges provide self-alignment and rigid support for medium-duty applications.
- Mounting bolt holes are interchangeable with pressed steel flangette units of corresponding size.

Suggested shaft tolerances: nominal to  $-.013$  mm,  $-.0005$ ".

### BEARING DATA

<sup>(1)</sup> All units have a 1/4-28 grease fitting, except as noted.

: 10-32 grease fitting.

Shaft diameter with an S = smaller housing.

## GRFD, GRFDR RELUBRICATABLE SERIES - RFD, RFDR NON-RELUBRICATABLE SERIES

- Malleable iron flange cartridges provide self-alignment and rigid support for medium-duty applications.

Suggested shaft tolerances: nominal to  $-.013$  mm,  $-.0005$ ".

BEARING DATA

| Unit        | Bearing Number | Dimensions and Load Ratings |
|-------------|----------------|-----------------------------|
| RFD, RFDR   | ...KRRB        | Page D53                    |
| GRFD, GRFDR | G...KRRB       | Page D54                    |

FOR NON-RELUBRICATABLE SERIES, OMIT G PREFIX ON UNIT AND BEARING NUMBER.

TO ORDER, SPECIFY UNIT AND SHAFT DIAMETER. Example: GRFD 1 3/16" or GRFDR 1 3/16" or RFD 1 3/16" or RFDR 1 3/16".

(1) All units have a 1/4-28 grease fitting, except as noted.

: 10-32 grease fitting.

Shaft diameter with an S = smaller housing.

# BALL BEARINGS

## GVFTD, GVFTDR RELUBRICATABLE SERIES - VFTD, VFTDR NON-RELUBRICATABLE SERIES

- Malleable iron flange cartridges provide self-alignment and rigid support for medium-duty applications.

Suggested shaft tolerances: nominal to  $-.013$  mm,  $-.0005$ ".

### BEARING DATA

<sup>(1)</sup> All units have a 1/4-28 grease fitting.  
Shaft diameter with an S = smaller housing.

**GRFTD, GRFTDR RELUBRICATABLE SERIES - RFTD, RFTDR NON-RELUBRICATABLE SERIES**

- Malleable iron flange cartridges provide self-alignment and rigid support for medium-duty applications.

Suggested shaft tolerances: nominal to  $-.013$  mm,  $-.0005$ ".

**BEARING DATA**

| Unit          | Bearing Number | Dimensions and Load Ratings |
|---------------|----------------|-----------------------------|
| RFTD, RFTDR   | ...KRRB        | Page D53                    |
| GRFTD, GRFTDR | G...KRRB       | Page D54                    |

**Relubricatable Series**

**Non-Relubricatable Series**

**FOR NON-RELUBRICATABLE SERIES, OMIT G PREFIX ON UNIT AND BEARING NUMBER.**

TO ORDER, SPECIFY UNIT AND SHAFT DIAMETER. Example: RFTD 1 3/16" or RFTDR 1 3/16" or GRFTD 1 3/16" or GRFTDR 1 3/16".

<sup>(1)</sup> All units have a 1/4-28 grease fitting. Shaft diameter with an S = smaller housing.

# BALL BEARINGS

## RC SERIES

- Convenient for mounting in straight-bore housings.
- Bearing features a self-locking collar and spherical outside diameter fitted to a corresponding spherical seat in the cartridge that provides self-alignment.
- Equipped with a G-KRRB (R-Seal) bearing.

### Suggested housing bore:

**Shaft Rotating:** nominal +.025 mm to +.076 mm, +.001" to +.003".  
**Shaft Stationary:** nominal +.00 mm to -.050 mm, +.000" to -.002".  
 Avoid excessive tightening of anchor bolts.

**Suggested shaft tolerances:** 1/2" - 1 15/16", nominal to -.013 mm, -.0005";  
 2" - 3 15/16", nominal to -.025 mm, -.0010".

All units have 1/4" -28 grease fittings.

**PBS SERIES**

- Economical transmission unit for light-duty, moderate-speed requirements.
- Housing includes two heavy-gage, zinc-plated steel stampings. One is a standard stamping used in the MST two-bolt flangette unit.
- RA-RRB (extended inner-ring) bearings are regularly furnished with this bearing. RR wide inner rings also can be used.
- Timken self-locking collar completes the assembly.
- Made with precision bearing seat and dimensions held to close tolerances. This provides accurate bearing-to-housing fit and assures proper alignment of parts.
- RA-RRB bearing used in the PBS pillow block has positive contact land-riding seals. It includes a shroud cap design and is permanently prelubricated.
- Base-to-center height and bolt spacing are interchangeable with many other pillow blocks on the market.

<sup>(1)</sup> Stamping thrust rating is 1/5 of stamping radial load rating. Shaft diameter with an S = smaller housing.

# BALL BEARINGS

## PB SERIES - RPB SERIES

- PB Series provides the advantages of ball bearings at an economical price.
- Used for light-duty applications.
- Consists of a two-piece separable zinc-plated steel housing with spherical bearing seat. This allows the spherically ground bearing to have initial self-alignment in all directions.
- The ball bearing is a RA-RRB extended inner ring type with positive contact land-riding seals and a self-locking collar.
- Incorporates improved shroud cap design and comes permanently prelubricated.
- RPB has same construction as PB-Type, but with a thick, electrically-conductive rubber interliner.
- Bearings in the RPB unit are designated as RA-RRB F-450 and have a special ball and race finish for quiet operation.
- RABR unit consists of the bearing with the rubber interliner.

Suggested shaft tolerances: nominal to **-.013 mm, -.0005"**.

<sup>(1)</sup> Housing thrust rating is 1/3 of housing radial load rating.

Load ratings are upright mounted capacities with load direction toward base. These units should not be mounted vertically or upside down.

Shaft diameter with an S = smaller housing.

<sup>(1)</sup> Bearing suffix number FS450.

<sup>(2)</sup> Housing thrust rating is 1/3 of housing radial load rating. Maximum suggested speed is 2400 RPM.

### VFMST SERIES

- Zinc-plated, pressed-metal flange unit is assembled with an RA-RR prelubricated extended inner ring type bearing.
- Ideal for light-duty applications.
- Features flush-mounting.
- Additional contamination protection.
- Self-aligning.

Shaft diameter with an S = smaller housing.

<sup>(1)</sup> Housing thrust rating is 1/3 of housing radial load rating.

### LFST SERIES

- Zinc-plated, pressed-steel and flush-mounted.
- Simplifies bearing flange unit installations.
- Conductive rubber interliner reduces noise and vibration. Allows for alignment while pressed-steel flange assures rigid bearing support.
- Bolt hole spacing permits interchangeability with competitive mountings.
- Offers compact, economical, corrosion-resistant housing and balanced design.
- Features Timken RAL light series ball bearings. The RAL provides precision in an extended inner ring bearing with superior shroud seal protection and self-locking collar.
- Bearings are prelubricated.

<sup>(1)</sup> Housing thrust rating is 1/3 of housing radial load rating. Maximum suggested speed is 2400 RPM.

# BALL BEARINGS

## RR FLANGETTE UNIT

- Consists of two interchangeable, pressed-steel, zinc-plated flanges housing a standard bearing with self-locking collar.
- Spherical inside surfaces of each pair of flanges mate with the spherical outside surface of the bearing's outer ring. This provides initial self-alignment.
- Flangette is equipped with the KRRB (R-Seal) wide inner ring ball bearing.
- All units are non-relubricatable.

**Suggested shaft tolerances:**  $\frac{1}{2}$ " -  $1 \frac{15}{16}$ ", nominal to **-.013 mm, -.0005"**;  
 2" -  $2 \frac{3}{16}$ ", nominal to **-.025 mm, -.0010"**.

<sup>(1)</sup> Thrust ratings for stamping are 50% of radial ratings.  
<sup>(2)</sup> Stampings must be ordered in pairs to assemble bearing.  
 Shaft diameter with an S = smaller housing.

### RA FLANGETTE UNIT

- Similar to Timken RR flangette unit.
- Consists of two interchangeable, pressed-steel, zinc-plated flanges that house a standard ball bearing.
- Incorporates an extended inner ring bearing with a self-locking collar and spherical seat in the cartridge, providing initial self-alignment.
- Equipped with a RA-RRB extended inner ring ball bearing.
- Units are non-relubricatable.

**Suggested shaft tolerances:**  $\frac{1}{2}$ " -  $1\frac{15}{16}$ ", nominal to **-.013 mm, -.0005"**;  
 2" -  $2\frac{3}{16}$ ", nominal to **-.025 mm, -.0010"**.

<sup>(1)</sup> Thrust ratings for stamping are 50% of radial ratings.  
<sup>(2)</sup> Stampings must be ordered in pairs to assemble bearing.  
 Shaft diameter with an S = smaller housing.

# BALL BEARINGS

## RAT, RRT TWO-BOLT FLANGETTE UNITS

- Designed for installations where the standard three-bolt flangettes cannot be used due to space limitations.
- Like standard three-bolt flangettes, they are available with RA-RRB extended inner ring ball bearings and the KRRB wide inner ring ball bearings (RRT) with self-locking collars.
- All units are non-relubricatable.

**Suggested shaft tolerances:** 1/2" - 1 15/16", nominal to **-.013 mm, *-.0005"***;  
2" - 2 3/16", nominal to **-.25 mm, *-.0010"***.

<sup>(1)</sup> Thrust ratings for stamping are 50% of radial ratings.

<sup>(2)</sup> Stampings must be ordered in pairs to assemble bearing. Shaft diameter with an S = smaller housing.

### RATR, RRTR TRIANGLE FLANGETTE UNITS

- Similar to standard 47MS, 52MS, 62MS and 72MS, except the stamping is triangular instead of round.
- Used where space is a factor or where it is necessary to cut off one or more sides of the standard flangette stamping.
- RA-RRB and KRRB may be used with this stamping, as with other types of flangettes.
- All units are non-relubricatable.

Suggested shaft tolerances:  $\frac{1}{2}$ " - 1  $\frac{15}{16}$ ", nominal to -.013 mm, -.0005";  
 2" - 2  $\frac{3}{16}$ ", nominal to -.025 mm, -.0010".

(1) Thrust ratings for stamping are 50% of radial ratings.  
 (2) Stampings must be ordered in pairs to assemble bearing.  
 Shaft diameter with an S = smaller housing.

# BALL BEARINGS

## GRA AND GRR RELUBRICATABLE FLANGETTE UNITS

- Supplement to the standard non-relubricatable type.
- Zinc-plated and designed for relubrication in applications where excessive moisture and severe contamination are present.
- Relubricatable flangettes are dimensionally interchangeable with the non-relubricated types. Load ratings are also the same.
- Relubricatable units incorporate G-KRRB bearings and GRA-RRB inner ring bearings with positive contact land-riding seals and self-locking collars.
- Two stampings are needed to make a complete relubricatable flangette. Stamping A contains the boss for the grease fitting and a grease groove to allow grease to enter holes in the outer ring of the bearing. Stamping B contains a similar groove for the same purpose. With the grease groove in both stampings, the bearing can be reversed in the housing and still be relubricated.

### BEARING DATA

| Unit | Bearing Number | Dimensions and Load Ratings |
|------|----------------|-----------------------------|
| GRA  | GRA...RRB      | Page D57                    |
| GRR  | G...KRRB       | Page D54                    |

**Suggested shaft tolerances:**  $\frac{1}{2}$ " -  $1 \frac{15}{16}$ ", nominal to  $-.10$  mm,  $-.0005$ ";  
 $2$ " -  $2 \frac{3}{16}$ ", nominal to  $-.0255$  mm,  $-.0010$ ".

<sup>(1)</sup> Thrust ratings for stampings are 50% of radial ratings.

<sup>(2)</sup> Four bolt holes.

Shaft diameter with an S = smaller housing.

### RCSM, RCR, CR SERIES

- RCSM and RCR are quiet, synthetic, conductive rubber cylindrical cartridges designed for domestic heating, air-conditioning, ventilating equipment and other applications that require noise-free operation.
- All units are available with the RA-RRB extended inner ring bearings with positive contact land-riding seals and self-locking collar.
- Initial supply of grease is provided in the one-piece, non-relubricatable cartridges.
- Timken patented CR unit was designed to accommodate the wide tolerances of hot or cold rolled #10 gage (.134 in.), 3 1/2 in. O.D., electric resistance welded mechanical tubing similar to what is found in post office conveyor systems.

(1) Steady loads only. Thrust load is 1/3 radial load rating. Maximum suggested speed – 2400 RPM.

(2) Suffix for RA bearing is FS450 (RCSM and RCR Series).

# BALL BEARINGS

## RABR HVAC SPECIAL SERIES

- Features a conductive rubber interliner to dissipate static charges.
- Quiet RA-RRB extended inner ring bearings are prelubricated and have positive-contact, land-riding seals with self-locking collars.
- RABR units can be mounted in tri-arm brackets or pressed-steel stampings.
- Maximum suggested speed: 2400 RPM.

Suggested housing diameter = Nominal (A) -.130 mm -.380 mm, -.005", -.015".

# BALL BEARINGS

## RTU INDUSTRIAL SERIES

- Ball bearing take-up units are used where shaft adjustment and belt-tightening devices are required, such as in conveyor applications.
- Both types of take-up units incorporate self-aligning B-Type wide inner ring ball bearings with self-locking collars
- Use a G-KRRB, R-Seal Type wide inner ring bearing.
- Provides compact, efficient supports for adjustable shafts and conveyor take-up pulleys.
- Units are factory prelubricated. A grease fitting is provided for relubrication if required.
- See preceding page for take-up frames to fit these units.
- **Contact your Timken representative to discuss highly corrosive applications (e.g., food processing, chemical exposure) where Timken thin dense chrome coated bearings can be utilized.**

**Suggested shaft tolerances:**  $\frac{3}{4}$ " - 1  $\frac{15}{16}$ ", nominal to **-.013 mm,  $-.0005$ "**;  
 2" - 2  $\frac{15}{16}$ ", nominal to **-.025 mm,  $-.0010$ "**.

**YTU INDUSTRIAL SERIES**

- Used where shaft adjustment and belt-tightening devices are required, such as conveyor applications.
- Incorporates self-aligning B-Type extra wide inner ring ball bearings with setscrew lock.
- Provides compact, efficient supports for adjustable shafts and conveyor take-up pulleys.
- Factory prelubricated. A grease fitting is provided for relubrication if required.
- See preceding pages for take-up frames to fit these units.
- Safety end caps are available for selected sizes.
- **Contact your Timken representative to discuss highly corrosive applications (e.g., food processing, chemical exposure) where Timken thin dense chrome coated bearings can be utilized.**

**Suggested shaft tolerances:** 1/2" - **1 15/16"**, nominal to **-.013 mm, -.0005"**;  
 2" - **2 15/16"**, nominal to **-.025 mm, -.0010"**.

# BALL BEARINGS

## VTU STANDARD SERIES

- Used where shaft adjustment and belt-tightening devices are required (e.g., conveyor belt applications).
- Provides shaft-aligning B-Type wide inner ring ball bearings with self-locking collars.
- Provides compact, efficient supports for adjustable shafts and conveyor take-up pulleys.
- Units are factory prelubricated. A grease fitting is provided for relubrication if required.
- See preceding pages for take-up frames to fit these units.

**Suggested shaft tolerances:**  $3/4'' - 1\ 15/16''$ , nominal to  $-.013\text{ mm}$ ,  $-.0005''$ .  
 $2'' - 2\ 15/16''$ , nominal to  $-.025\text{ mm}$ ,  $-.0010''$ .

### TTU INDUSTRIAL SERIES

- Used where shaft adjustment and belt-tightening devices are required (e.g., in conveyor belt applications).
- Incorporates self-aligning, B-Type, extra wide inner ring ball bearings with self-locking collars.
- Uses a G-KPPB4 (Tri-Ply) type wide inner ring bearing.
- Provides compact, efficient supports for adjustable shafts and conveyor take-up pulleys.
- Units are factory prelubricated. A grease fitting is provided for relubrication if required.
- **Contact your Timken representative to discuss highly corrosive applications (e.g., food processing, chemical exposure) where Timken thin dense chrome coated bearings can be utilized.**

Suggested shaft tolerances: 2" - 2 3/16", nominal to -.025 mm, -.0010".

# BALL BEARINGS

## IDLER PULLEY UNITS

- A pressed-steel pulley and a Timken precision ball bearing with rubber seals are combined to make a self-contained unit.
- Two pulley designs are available. One for V-belts and another for the backs of V-belts. Both are made for A, B, C and D section belts.
- A chain idler is available that is identical in construction to the flat idler, with the addition of an assembled rubber "tire" (part number A-10927). The rubber "tire" cushions the chain, preventing undue wear on the pulley surface or chain.
- Idler pulley units feature a Timken single-row radial ball bearing with an inner ring extended on both sides. This provides clearance for abutting parts and greater support on the shaft.
- Contact-type rubber seals assure positive retention for lubricant and full protection against dirt, dust and foreign matter.

- All units are non-relubricatable. Special features include smoothly rolled-over edges, eliminating belt chafing and scuffing. The "weep holes" on the rivet circle allow water drainage when the pulley is mounted in a horizontal position.

TO ORDER, SPECIFY PULLEY NUMBER. Example: 008-10853 Idler Pulley.

| Pulley Number             | α Included Angle Degrees | Bearing Number | Bore                               |                 | A               | D <sub>1</sub> | W                  | Belt Pitch Dia. |               |                | Wt.           |

## ROLLER CHAIN IDLER SPROCKETS

- Sintered steel sprockets are hardened and provide an economical means of suitability.
- Replaces the hardened plate steel sprockets on most applications.
- All units are non-relubricatable.

TO ORDER, SPECIFY SPROCKET NUMBER. Example: 010-5017S Idler Sprocket.

## HOUSED UNITS REPLACEMENT CHART

| Housed Units                      | Replacement Bearing Assembly   | Features                                                                         | Part Number                                                                                                             |
|-----------------------------------|--------------------------------|----------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------|
| C                                 | MUB replaced by 1000KRB & Col. | Standard Series (SM) wide inner ring (B-Type), collar, caps, and wire            | Example: 2 1 <sup>1</sup> / <sub>16</sub> inch (uses MUB 2 1 <sup>1</sup> / <sub>16</sub> inch)                         |
| DRNR                              | 1000KR & Col. (Two)            | Single R-Seal (A-Type), complete bearing number marked on seal                   | Example: DRNR 1 3 <sup>1</sup> / <sub>16</sub> inch (uses two 1103KR & Col.)                                            |
| FLCT                              | RA000RRB & Col.                | Non-Relubricatable; B-Spherical outer ring; RR-Double R-Seal                     | Bearing identification marked on seal.                                                                                  |
| GRFD, GRFDR, GRFTD, GRFTDR        | G1000KRRB & Col.               | G-Relubricatable; B-Spherical outer ring; RR-Double R-Seal                       | Complete bearing number marked on seal.<br>Example: GRFD 1 3 <sup>1</sup> / <sub>16</sub> inch (uses G1103KRRB & col.)  |
| GRKD, GRSD                        | G1000KRRB & Col.               | G-Relubricatable; B-Spherical outer ring; RR-Double R-Seal                       | Complete bearing number marked on seal.<br>Example: GRKD 1 3 <sup>1</sup> / <sub>16</sub> inch (uses G1103KRRB & Col.)  |
| GVFD, GVFDR, GVFTD, GVFTDR        | GRA000RRB & Col.               | G-Relubricatable; B-Spherical outer ring; RR-Double R-Seal                       | Bearing identification marked on seal.                                                                                  |
| GVKD, GVSD                        | GRA000RRB & Col.               | G-Relubricatable; B-Spherical outer ring; RR-Double R-Seal                       | Bearing identification marked on seal.                                                                                  |
| LAK, LAS                          | G1000KLLB & Col.               | G-Relubricatable; B-Spherical outer ring; LL-Double Mechani-Seal                 | Complete bearing number marked on seal.<br>Example: LAK 1 3 <sup>1</sup> / <sub>16</sub> inch (uses G1103KLLB & Col.)   |
| LAKHL                             | 1000KLS & Col.                 | L-Single Mechani-Seal; S-External self-aligning                                  | Complete bearing number marked on seal.<br>Example: LAKHL 1 3 <sup>1</sup> / <sub>16</sub> inch (uses 1103KLS & Col.)   |
| LAO, LSAO                         | GN000KLLB & Col.               | G-Relubricatable; B-Spherical outer ring; LL-Double Mechani-Seal                 | Complete bearing number marked on seal.<br>Example: LAO 1 3 <sup>1</sup> / <sub>16</sub> inch (uses GN103KLLB & Col.)   |
| LCJ, LCJT                         | G1000KLLB & Col.               | G-Relubricatable; B-Spherical outer ring; LL-Double Mechani-Seal                 | Complete bearing number marked on seal.<br>Example: LCJ 1 3 <sup>1</sup> / <sub>16</sub> inch (uses G1103KLLB & Col.)   |
| LCJO                              | GN000KLLB                      | G-Relubricatable; N-Heavy Series; B-Spherical outer ring; LL-Double Mechani-Seal | Complete bearing number marked on seal.<br>Example: LCJO 1 3 <sup>1</sup> / <sub>16</sub> inch (uses GN103KLLB & Col.)  |
| PB, PBS, VKD, VSD                 | RA000RRB & Col.                | Non-Relubricatable; B-Spherical outer ring; RR-Double R-Seal                     | Bearing identification marked on seal.                                                                                  |
| RA Flangette, RAT Flangette       | RA000RRB & Col.                | Non-Relubricatable; B-Spherical outer ring; RR-Double R-Seal                     | Bearing identification marked on seal.                                                                                  |
| RA Relubricatable Flangette       | GRA000RRB & Col.               | G-Relubricatable; B-Spherical outer ring; RR-Double R-Seal                       | To order, specify bearings & markings, Example: 1-GRA103RRB & Col., 1-G62MSA marking, 1-G62MSB marking                  |
| RAK, RAS, RAKH, RSA               | G1000KRRB & Col.               | G-Relubricatable; B-Spherical outer ring; RR-Double R-Seal                       | Complete bearing number marked on seal.<br>Example: RAK 1 3 <sup>1</sup> / <sub>16</sub> inch (uses G1103KRRB & Col.)   |
| RAKHL                             | 1000KRS & Col                  | R-Single R-Seal; S-External self-aligning                                        | Complete bearing number marked on seal.<br>Example: RAKHL 1 3 <sup>1</sup> / <sub>16</sub> inch (uses 1103KRS & Col.)   |
| RAKN, RASN                        | 1000KRRB & Col.                | Non-Relubricatable; B-Spherical outer ring; RR-Double R-Seal                     | Complete bearing number marked on seal.<br>Example: RAKN 1 3 <sup>1</sup> / <sub>16</sub> inch (uses 1103KRRB & Col.)   |
| RAO, RSAO                         | GN000KRRB & Col.               | G-Relubricatable; B-Spherical outer ring; RR-Double R-Seal                       | Complete bearing number marked on seal.<br>Example: RSAO 3 3 <sup>1</sup> / <sub>16</sub> inch (uses GN303KRRB & Col.)  |
| RASC                              | GC1000KRRB & Col.              | G-Relubricatable; C-Concentric collar; B-Spherical outer ring; RR-Double R-Seal  | Complete bearing number marked on seal.<br>Example: RASC 1 3 <sup>1</sup> / <sub>16</sub> inch (uses GC1103KRRB & Col.) |
| RCJ, RCJT, RC                     | G1000KRRB & Col.               | G-Relubricatable; B-Spherical outer ring; RR-Double R-Seal                       | Complete bearing number marked on seal.<br>Example: RCJ 1 3 <sup>1</sup> / <sub>16</sub> inch (uses G1103KRRB & Col.)   |
| RCJN, RR Flangette, RRT Flangette | 1000KRRB & Col.                | Non-Relubricatable; B-Spherical outer ring; RR-Double R-Seal                     | Complete bearing number marked on seal.<br>Example: RCJN 1 3 <sup>1</sup> / <sub>16</sub> inch (uses 1103KRRB & Col.)   |
| RFC, RCJC, RCJTC                  | GC1000KRRB & Col.              | G-Relubricatable; C-Concentric collar; B-Spherical outer ring; RR-Double R-Seal  | Complete bearing number marked on seal.<br>Example: 1 3 <sup>1</sup> / <sub>16</sub> inch (uses GC1103KRRB & Col.)      |
| RFD, RFDR, RFTD, RFTDR            | 1000KRRB & Col.                | Non-Relubricatable; B-Spherical outer ring; RR-Double R-Seal                     | Complete bearing number marked on seal.<br>Example: RFD: 1 3 <sup>1</sup> / <sub>16</sub> inch (uses 1103KRRB & Col.)   |

## BALL BEARINGS

### MACHINE UNITS

A complete machine unit consists of either a standard (SM) or heavy (SMN) Series wide inner ring bearing, an inner and outer sealing cap, a retaining wire and self-locking collar – or an integrally sealed bearing and collar. These units are available as bearing replacements for Timken power transmission units such as the SA, SAO, DSA and DSAO pillow blocks, C and Co cylindrical cartridges or special housings.

The “caps” are two steel members which comprise a non-integral frictionless labyrinth seal. The inner member is pressed on

the inner ring and rotates with it. The outer member is pressed in the housing against the face of the outer ring and is held in place by the round retaining wire.

The A-Type unit is designated MUA (standard series) or MUOA (heavy series); the B-Type MUB (standard series) or MUOB (heavy series). The B-Type bearing is mounted in the spherical housing seat by means of two slots milled diametrically opposite each other in the housing. The bearing can be inserted at right angles and swiveled into position.

#### A-TYPE

Figure 1 shows a machine unit with an A-Type bearing carrying the designation MUA (standard series) and MUOA (heavy series). It consists of a wide inner ring, open type or one-piece R-seal bearing, collar, caps and wire. The “caps” are two steel members which comprise a non-integral frictionless labyrinth seal. The inner member is pressed on the inner ring and rotates with it. The outer member is pressed in the housing against the face of the outer ring and is held in place by the round retaining wire.

**A-Type units are being converted to a KR-Type bearing with collar, B-Type cap and wire.**

Figure 1 – MUA, MUOA

#### B-TYPE

Figure 2 is the same as Figure 1, except that the bearing is B-Type and seal on collar side is either a labyrinth seal (as shown) or a one-piece R-Seal. In the latter case no wire is supplied. The designation of the machine unit is MUB (standard series) or MUOB (heavy series). The B-Type bearing is mounted in the spherical housing seat by means of two slots milled diametrically opposite each other in the housing. The bearing can be inserted at right angles and swiveled into position. No additional shoulders or snap rings are required to locate this type.

**B-Type units are being converted to a KRB-Type bearing and collar.**

Figure 2 – MUB, MUOB

## TIMKEN® SAFETY END CAPS MAKE WORKPLACE PROTECTION A SNAP

Easy-to-install Timken Safety End Caps protect exposed rotating shafts, reducing hazards around many types of equipment. The patent-pending design meets all applicable OSHA requirements.

The Timken safety product line consists of a mounting ring and snap-on cover, both molded in durable, bright yellow polymer. The end cap snaps into the adhesive-backed ring that adheres to the outboard face of most flanged bearing housings. The secure 360 degree fit makes for a rugged unit that also provides basic protection and washdown.

Factory retrofits are a snap with everything provided in a handy kit. The cost-effective end covers are simple to install on Timken and most other flanged units. Current sizes range from 3/4 in. to 1 15/16 in. (20 mm to 50 mm) shaft sizes for two or four-bolt flanged cast iron, malleable iron, and other selected housing styles and sizes.

### KIT CONTENTS

Timken safety end caps come in a convenient kit that contains everything required for a safe and durable mounting:

- Polymer end cap
- Adhesive-backed polymer mounting ring
- Scuffing pad
- Cleaning cloth

### INSTALLATION

Steps in the simple mounting procedure include:

1. Use the scuffing pad on housing's mating surface where the mounting ring will be placed.
2. Clean off mounting area.
3. Attach adhesive-backed mounting ring.
4. Hold mounting ring in place with pressure for 60 seconds.
5. Allow adhesive to set for minimum of one hour.
6. Snap end cap into place.

Safety end caps protect against rotating stub shafts.

### ORDERING INFORMATION

| Kit *       | Shaft Sizes                           |
|-------------|---------------------------------------|
| 204 ECY Kit | 3/4, 20 mm                            |
| 205 ECY KIT | 7/8, 15/16, 1, 25 mm                  |
| 206 ECY KIT | 1 1/16, 1 1/8, 1 3/16, 1 1/4 S, 30 mm |
| 207 ECY KIT | 1 1/4, 1 5/16, 1 3/8, 1 7/16, 35 mm   |
| 208 ECY KIT | 1 1/2, 40 mm                          |
| 209 ECY KIT | 1 5/8, 1 11/16, 1 3/4, 45 mm          |
| 210 ECY KIT | 1 15/16, 2 S, 50 mm                   |

\* Kits are designed to fit the following housed units -  
 4-Bolt: YCJ, RCJ, RCJC, TCJ, LCJ, SCJ, VCJ  
 2-Bolt: YCJT, RCJT, RCJTC, TCJT, LCJT, SCJT, VCJT

## TIMKEN BALL BEARING PILLOW BLOCK GREASE

Timken Ball Bearing Pillow Block grease is a NLGI No. 2 polyurea-thickened grease. It provides outstanding long-life, moderately high-temperature lubrication to ball bearings. This grease maintains its mechanical shear stability and provides corrosion resistance, even in the presence of salt water. Timken Ball Bearing Pillow Grease features low-noise characteristics and excellent pumpability. This grease does not contain extreme-pressure additives but is inhibited against rust and oxidation. Operating temperatures range from -40° F to 400° F (-40° C to 163° C). This grease is typically used in lightly loaded ball bearings in pillow blocks and conveyors that operate in high-temperature environments, including kiln and glasswork applications, electric motors, chemical manufacturing and noise-sensitive environments.

### SINGLE-POINT AND CENTRALIZED MULTI-POINT LUBRICATORS

Proper lubrication is critical to bearing and machine performance. To help prevent damage, Timken G-Power and M-Power single-point lubricators deliver periodic grease to bearings, chains, guideways and other industrial equipment components. You can choose from gas-powered or electromechanical varieties to meet your operating specifications. C-Power multi-point lubricators are a centralized lubrication system capable of delivering grease to up to six lubrication points. Oil is not an option for this unit.

G-Power and M-Power and C-Power canisters can be filled with Timken-formulated lubricants or many other types of commercial lubricants. A full line of accessories—including brackets, clamps, brushes, fittings and hose extensions—ease installation and offer a host of mounting options for hard-to-reach locations.

## **BALL BEARINGS**

### **LUBRICATION**

The Timken Company understands the importance of friction management. Our line of application- and environment-specific lubricants have been developed by leveraging our knowledge of tribology and anti-friction bearings and how these two elements affect overall system performance.

Timken lubricants help bearings and related components operate effectively in demanding industrial operations. High temperature, anti-wear and water-resistant additives offer superior protection in challenging environments.

Similar to our bearings, all Timken lubricants are backed by highly trained customer service and technical support. Industrial customers turn to Timken for comprehensive friction management solutions, and we help customers analyze performance and suggest options that make sense for their unique operating conditions and maintenance intervals.

## SUPER PRECISION MACHINE TOOL BEARINGS

**Overview:** Timken is a premier manufacturer of Fafnir® super precision machine tool ball bearings. From standard catalog ABMA/ISO designs to custom sizes and features, Timken has the super precision ball bearing to meet your needs.

- **Sizes:** 10 mm - 300 mm (.3937 in. - 11.8110 in.) bore.  
26 mm - 400 mm (1.0236 in. - 15.7480 in.) O.D.
- **Markets:** High speed machine tool spindles, high stiffness ball screw support systems, low noise “quiet” bearings, aircraft generator, defense.
- **Features:** ABMA ABEC 7/9 (ISO P4/P2) precision level angular contact 15°, 25°, 60°; single and double-row ball screw; high speed seals’ ceramic balls; advanced materials.
- **Benefits:** Very high speed; high accuracy; high stiffness; low operating temperature; low noise; low vibration.

## Super Precision Ball Bearings Angular Contact

### Contact Angle:

- 2 = 15°
- 3 = 25°

### Construction:

- K** Conrad
- WI** angular contact; low shoulder on outer ring
- WO** angular contact; low shoulder on inner ring
- WN** angular contact; low shoulder on both rings
- HX** angular contact; low shoulder on both rings

### Precision Class:

- MM/MMV** super high precision between ABEC 7 (ISO P4) and ABEC 9 (ISO P2)
- MMX** ultra precision • ABEC 9 (ISO P2)

### Retainer: No retainer callout implies Timken® Fafnir® PRC

- PRB** molded nylon cage
- PRC** molded reinforced nylon cage
- CR** phenolic (composition) – Timken Fafnir standard
- MBR** machined bronze

**VV**

high speed seals

**2 MM C 91 04 WI CR DUL A3188**

Hybrid  
Ceramic

### Series:

- 9300** ultra-light
- 9100** extra-light
- 99100** extra-light
- 200** light
- 300** medium

### Bore Size:

- (04 and up, multiply these last two numbers by 5 to get bore in millimeters:)
- 00** 10 mm
  - 01** 12 mm
  - 02** 15 mm
  - 03** 17 mm
  - 04** 20 mm

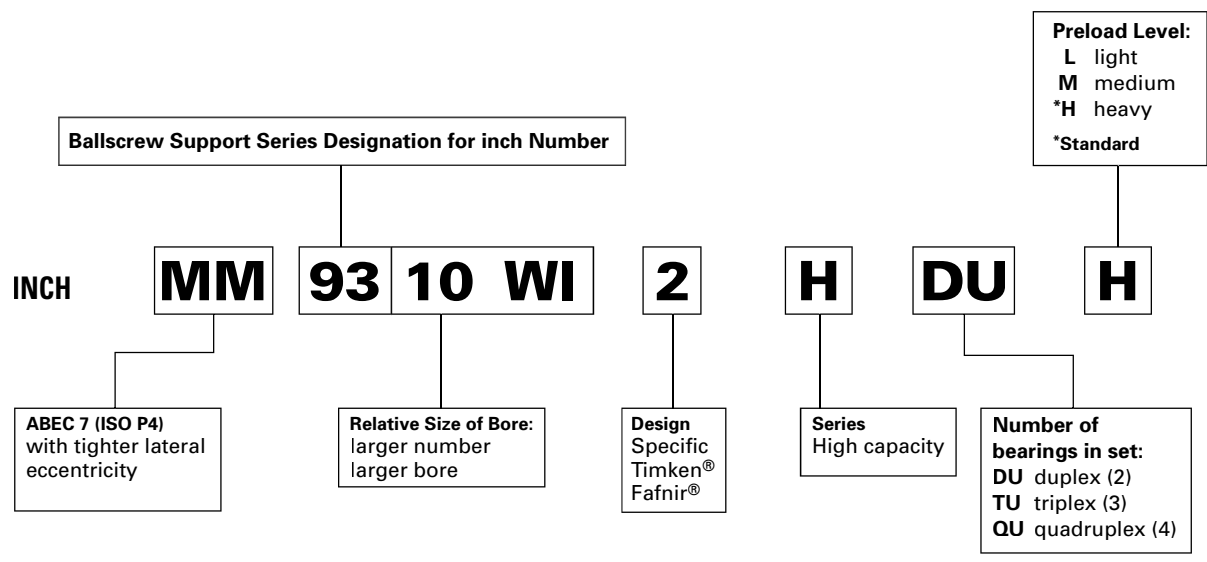

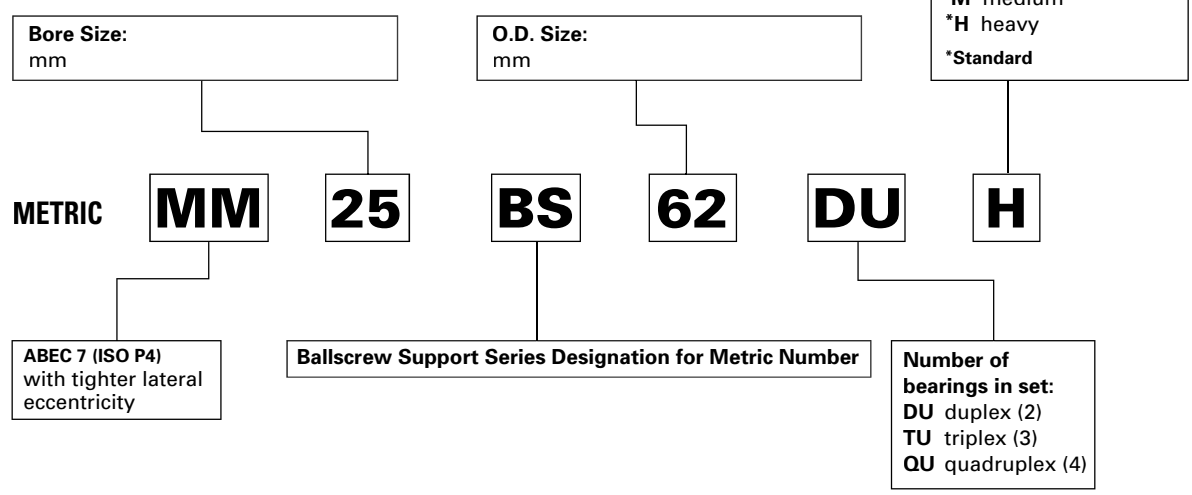

### Preload: Universal Flush Ground :

- \*SUX** single bearing, extra-light
- \*SUL** single bearing, light
- \*SUM** single bearing, medium
- \*SUH** single bearing, heavy
- DUX** duplex pairs of bearings, extra-light
- DUL** duplex pairs of bearings, light
- DUM** duplex pairs of bearings, medium
- DUH** duplex pairs of bearings, heavy
- TUX** triplex set of bearings, extra-light
- TUL** triplex set of bearings, light
- TUM** triplex set of bearings, medium
- TUH** triplex set of bearings, heavy
- QUX** quadruplex set of bearings, extra-light
- QUL** quadruplex set of bearings, light
- QUM** quadruplex set of bearings, medium
- QUH** quadruplex set of bearings, heavy

An example of a specification number for other than standard

## INTRODUCTION

### MEANINGS OF PREFIXES AND SUFFIXES

In the Timken® Fafnir® numbering system the basic number which denotes the size and series is always retained. When special variations are made, as in the case of precision bearings, prefixes and suffixes are added which have definite meanings as follows:

#### PREFIXES

- MM** • Super Precision • ABEC 7/ABEC 9 (ISO P4/P2)
- 2MM/2MMV** • Super Precision between ABEC 7 and ABEC 9 (ISO P4/P2) • low contact angle - 15°
- 3MM/3MMV** • Super Precision between ABEC 7 and ABEC 9 (ISO P4/P2) • high contact angle - 25°
- MMX** • Ultra Precision • ABEC 9 • (ISO P2)

#### SUFFIXES

- K** • Deep groove radial
- WI** • Angular contact-low shoulder on outer
- WO** • Angular contact-low shoulder on inner
- WN** • Angular contact-low shoulder on both inner and outer
- HX** • Angular contact-low shoulder on both inner and outer
- CR** • Composition cage (non-metallic)
- MBR** • Machined bronze cage
- SR** • Machined steel cage
- PRB** • Molded nylon cage
- PRC** • Molded nylon cage (reinforced)
- PRF, PRG** • Special high performance material
- SUL** • Flush-ground single bearing • Light preload
- SUM** • Flush-ground single bearing • Medium preload
- SUH** • Flush-ground single bearing • Heavy preload
- DUL** • Flush-ground duplex bearings • Light preload
- DUM** • Flush-ground duplex bearings • Medium preload
- DUH** • Flush-ground duplex bearings • Heavy preload
- TUL** • Flush-ground triplex bearings • Light preload
- TUM** • Flush-ground triplex bearings • Medium preload
- TUH** • Flush-ground triplex bearings • Heavy preload
- QUL** • Flush-ground quadruplex bearings • Light preload
- QUM** • Flush-ground quadruplex bearings • Medium preload
- QUH** • Flush-ground quadruplex bearings • Heavy preload

### PERFORMANCE

The performance of a super precision bearing is not completely defined by the ABEC/ISO classes. The latitude of these classes allows for a significant range of variability in product performance among bearing manufacturers. Characteristics such as raceway curvature and uniformity; the balls' conformance to sphericity; race and ball surface finish; waviness of contact areas; preload offset tolerance; cleanliness; calibration of envelope dimensions; matching of bearings within a set; cage design and material; lubricant; radial play; contact angle and precision of ball complement are not defined by ABEC/ISO. All have a direct impact on the service life and performance of a bearing. The lack of a comprehensive standard allows inferior bearings to be marketed as ABEC 7 or 9 (ISO P4 or P2) without the ability to produce superior performance. All Timken MM, MMV, and MMX precision grade comply with strict controls over these non-specified parameters, to provide premium performance.

## OPTIMIZED GRADES OF PRECISION

### MM, MMV – SUPER PRECISION, SUPER HIGH PRECISION (ABEC 7/9, ISO P4/P2)

Super precision bearings manufactured to the MM(V) tolerance class operate with running accuracy and performance levels meeting ABEC 9 (ISO P2) yet maintain non-critical features at ABEC 7 (ISO P4) level for cost-effectiveness. Bore and O.D. surfaces are coded in micron units for the convenience of the discriminating machine tool builder striving for optimum fitting of crucial spindle components.

### MMX – ULTRAPRECISION (ABEC 9, ISO P2)

Super precision bearings with closer tolerances and running accuracies than ABEC 7 (ISO P4) bearings are made to ABEC 9 (ISO P2) tolerances. Bearings produced to these tolerances are generally used on ultra-high-speed grinding spindles designed for tight dimensional tolerances and super-fine surface finishes. Contact your Timken representative for availability of product range.

## BEARING TYPES

### ANGULAR-CONTACT BEARINGS

2MM-WI types with 15 degree initial contact angle are designed to meet the needs of machine builders for precision bearings which will operate at as low a temperature as possible for a wide range of speeds and operating loads. In order for machines to produce more accurate work at a higher production rate, the bearings must provide a high degree of rigidity in both axial and radial directions while operating at minimum temperatures. For example, precision machining or cutting tools impose heavier loads on bearings than those encountered in precision grinding. In the former, speeds are slower and loads heavier than the latter, where speeds are high and loads light. The 2MM-WI Type gives the machine builder the flexibility required to meet such variations in applications.

D

**3MM-WI** manufactured with 25 degree contact angle, are for use on applications where the loading on the bearings is predominately thrust – and a high degree of axial rigidity is a definite requirement. Typical applications for these are large vertical rotary surface grinders, horizontal and vertical disc grinders, and thrust bearing applications for heavy-duty lathes where the bearings must directly carry extremely high tail stock or chucking pressure.

**2MM-WO** with 15 degree initial contact angle are designed for extremely high-speed applications where centrifugal force of the balls is the principal load on the bearing. Unlike the MM-WI Type, which has a low shoulder outer ring, the 2MM-WO Type has full shoulders on both sides of the outer race and a low shoulder on one side of the inner ring. This design permits assembly with a maximum complement of balls and a one-piece cage which pilots against the precision-ground lands of the outer ring. Generally this bearing series is supplied with a separable inner ring and ball retaining cage along with special race geometry for extremely high-speed operation.

**2MMV and 3MMV-HX** are dimensionally interchangeable with equivalent 9100, 99100, 9300 and ISO Series-10 and 19 bearings. These designs enable spindle heads to remove more material in less time while maintaining superior machining tolerances. This is achieved through a proven combination of unique ball complements with precision engineering raceway geometries.

**2MMV and 3MMV-HX VV** possess all of the high-speed advantages of the HX but with true high speed seals. These bearing seals protect lubricant from outside contaminants while ensuring internal lubricant retention, extending service life significantly.

**2MMV and 3MMV 99100WN** are available with 15 degree or 25 degree contact angle variations and have been developed to operate under the demanding requirements of high-speed machine tools. They incorporate design features which permit operation at higher speeds than standard angular contact ball bearings. The bore, outside diameter and width are the same as the MM9100 Series.

### BALL SCREW SUPPORT BEARINGS

To meet the demands of the servo-controlled machinery field, the Timken® Fafnir® ball screw support bearings are specially designed with steep contact angles and offer high levels of stiffness for ball screw application requirements. Timken's most recent product offering in this area is a series of double-row, sealed, flanged (or cartridge) units that use an integral double-row outer ring to help simplify installation procedures. Timken offers the following ball screw support bearing products:

- Inch Series bearings (MM9300)
- Metric Series bearings (MMBS)
- Flanged Cylindrical Cartridge housings (BSBU)
- Pillow Block housings (BSPB)
- Integral Double-Row units (MMN, MMF)

## BALL BEARINGS

### INTRODUCTION

Workhead and tool spindles are the most important components of machine tools. Consequently, to reach the requirements for spindle speed, work accuracy and finish, selection of the proper size and type of ball bearings to support these spindles is a critical design problem.

Of all the anti-friction bearing types, super precision ball bearings have proved to be the best value for the wide variety of bearing applications covering broad ranges of operating loads, speeds and lubrication conditions. Duplexed, preloaded, angular contact bearings with one-piece composition retainers, have excellent capacity and provide maximum spindle rigidity. These bearings are widely used in achieving faster speeds, greater accuracy, smoother finishes and higher production rates.

Many considerations are involved in the choice of bearings for precision applications. Among those which influence the performance of machine tool spindles are the internal fit-up and geometry of the bearings, the mounting arrangement, the shaft and housing mounting fits, the balance and alignment of the rotating parts, and last, but equally important, the lubrication. While many of these factors are significant in slow-speed applications, all of them must be considered for high-speed spindles.

To minimize deflection under load, shafts for machine tool spindles are designed to have a minimum unsupported length and maximum cross-section. For the same reason, spindle housings are designed heavy enough to carry the work load. Their cross-sections are made as uniform as possible to reduce stress concentration during uneven deflection of the frame due to thermal changes. In addition, heavy, well-proportioned housings can function as sinks to conduct heat away from ball bearings.

### SELECTIVE ASSEMBLY

Under certain conditions it may be desirable to control fits more accurately without the added expense of using closer tolerance bearings and assembly parts. This can be accomplished by selective assembly of the bearings, shafts, and housings, after they have been sized and sorted according to bores and outside diameters. Timken provides bore and O.D. micron coding as standard practice for super precision angular contact radial ball bearings. This improved fit-up at assembly provides a higher degree of precision from the spindle.

### SUCCESSFUL APPLICATIONS

Detailed assembly drawings on the following pages are representative of successful applications of Timken® Fafnir® super precision bearings on such equipment; high-cycle wheel heads; high-speed internal grinding spindles; super precision work heads; and high-speed router spindles. It is hoped that these arrangements will stimulate questions regarding your particular application problems which will promptly be addressed by your Timken representative.

### SPECIAL REQUIREMENTS

High-speed grease-lubricated spindles and heavy precision workheads requiring unusual rigidity and running accuracy are a few of the many special problems involving super precision bearings. These and many other applications generally require design features that can be reviewed by your Timken representative.

D

## APPLICATIONS

### HIGH-SPEED INTERNAL GRINDING SPINDLE

Designed for internal precision grinding, this spindle incorporates 2MM9106W0-CR super precision bearings, preloaded by a nest of coiled helical springs mounted in a cartridge. Thrust load exerted by the springs assures intimate contact of the balls with the bearing raceways under all operating conditions. The sealed construction provides highly effective protection against intrusion of coolant and foreign matter. Grease, packed in each bearing prior to assembly, is sealed-in for life. Operating speed of this spindle is 25000 RPM.

### ULTRA PRECISION SURFACE GRINDING SPINDLE

2MMX9122W1-DUM super precision bearings, produced to ABEC9 tolerances, are employed in this horizontal surface grinding spindle for maximum rigidity and accuracy. A back-to-back pair of 2MM312W1-CR-DUL super precision bearings is used at the floating location. This spindle grinds surfaces that are accurate within .000025 inch, flat and parallel, are square within .000010 inch, and to a surface finish of 5 rms, or better. The spindle, driven by a 30 hp motor, operates at 900 RPM. Bearings are packed with grease prior to assembly.

### PRECISION SURFACE GRINDING SPINDLE

This motorized surface grinding spindle, operating at 3600 RPM, uses 2MM9107W1-DUM duplex super precision preloaded bearings at both locations, mounted back-to-back, with one pair floating. Labyrinth slinger-type sealing prevents entry of contaminants and seals in the lubrication. Bearings are grease lubricated for life.

### HEAVY-DUTY PRECISION BORING SPINDLE

Super precision, duplexed, preloaded bearings mounted back-to-back are used at each location in this boring spindle to assure smooth performance and a high degree of radial and axial rigidity. Operating speeds vary between 200 and 3000 RPM. Equal-length spacers between the bearings at the work end increase spindle rigidity. When the bearings are properly positioned on the shaft and the respective rings securely clamped, the preload is reproduced and no subsequent adjustment is required. Just prior to assembly, each bearing is packed with grease for life.

### SIX-SPINDLE AUTOMATIC SCREW MACHINE

This bearing arrangement meets the demand for a high-speed, heavy-duty, multiple-spindle screw machine to operate with constant accuracy at maximum production. Because of the hollow shaft construction and the short distance between bearings, extra-light series duplex pairs are used at each location. This affords a high degree of radial rigidity and adds stiffness to the shaft. By mounting a duplex pair of flanged (3MMF) bearings with a 2MM super precision bearing, back-to-back, under a predetermined preload at the front end, accuracy and rigidity of the spindle are assured and permit a straight housing bore. The rear pair of back-to-back bearings is allowed to float in the housing, making an outer-ring spacer unnecessary. Lubrication is by pressure-feed oil circulation.

D

## BALL BEARINGS

### HIGH-SPEED PRECISION BORING HEAD

This high-speed boring head operates at 2500 to 3000 RPM, employing angular-contact, super precision bearings. The front bearings are of different sizes. The outer ring of the larger bearing abuts and is clamped against the housing shoulder. The inboard bearing is permitted to move axially in its housing under spring load. At the rear location two bearings, of the same size and spring loaded, are allowed to float in the housing as temperature differentials occur in the operation spindle. With this head, interference shafts may be permitted without affecting bearing preload. Excessive heat generation is prevented, resulting in low operating temperatures. Bearings are grease lubricated.

### ULTRA PRECISION GRINDING WORKHEAD

This workhead must maintain straightness and roundness accuracy within ten millionths (.000010) of an inch. To meet such rigid requirements for extremely close dimensional control, ultra precision ball bearings and a shaft of extra stiffness are used. The bearings for such applications are manufactured to tolerances closer than those for ABEC 9 (ISO P2) specifications. Equally important is the high degree of workmanship and accuracy with which the shaft, housing and component parts of the workhead must be made. Upper section shows a four-bearing arrangement for heavy work. Lower half shows a two-bearing mounting for lighter work. In either case, the bearings are packed with grease, prior to mounting.

### PRECISION TOOLROOM SURFACE GRINDER SPINDLE

Timken® Fafnir® duplexed, super precision, preloaded bearings used in this spindle provide the high degree of rigidity in both directions necessary to meet requirements for modern surface grinding and to assure efficient performance at a low operating temperature. The housing is bored straight-through to assure true alignment – the housing shoulders are eliminated. The precision ground outer sleeve is doweled to the housing to provide the means for stabilizing the spindle axially at the work end bearing location. The rear pair of bearings floats to compensate for thermal changes. Bearings are grease lubricated for life just prior to assembly.

### SINGLE BAR MACHINE

This spindle is supported by two pairs of 2MM9124WI-DUM super precision bearings, mounted back-to-back in tandem pairs. Operating speeds vary from 78 to 1500 RPM. A pair of 2MM9122WI-DUM bearings mounted in tandem carries a 25000 pound thrust load during the unchucking operation. The bearings are grease packed for life prior to assembly.

### 100,000 RPM HIGH-CYCLE WHEELHEAD

Super precision 2MMX9101WO-CR bearings produced to ABEC 9 (ISO P2) RPM tolerances are spring-loaded in this wheelhead which operates at 100,000 RPM. Oil mist lubrication is employed and the motor is water cooled.

D

### PRECISION JIG-BORING SPINDLE

This jig-boring spindle delivers extreme accuracy over a wide range of speeds. Excellently designed, it is supported with 2MM210WI-DUM grease-lubricated super precision bearings. With this spindle, holes located to an accuracy of one ten-thousandth (.0001) of an inch are bore ground straight and to size limits of better than two ten-thousandths (.0002) of an inch.

### SUPER PRECISION LATHE HEADSTOCK

This lathe spindle produces work held to a roundness of 35 millionths (.000035) of an inch. Maximum operating speed is 4800 RPM. Tandem pair of 3MM9114WI-DUL bearings is opposed by a spring-loaded 3MM9113WI bearing, resulting in excellent spindle rigidity. Bearings are prelubricated with grease.

### HIGH-SPEED MOTORIZED ROUTER

A specially matched duplex pair of Timken® Fafnir® 2MM210WI-DU-FS223 super precision ball bearings, mounted back-to-back at the work end, affords the necessary bearing rigidity to permit routing through aluminum plate one inch thick with a single pass. The upper bearing is spring-loaded and permitted to float. Router is driven by a 30 hp motor at speeds up to 15000 RPM, and uses oil mist lubrication.

### PRECISION VERTICAL MILLING SPINDLE

This spindle operates at 12 different speeds ranging from 260 to 6200 rpm under a wide variety of conditions. At the work end, two duplex pairs of Timken Fafnir 2MM212WI-DUL preloaded bearings are mounted in tandem in a back-to-back arrangement, separated by spacers of equal length. This affords extremely high radial and axial rigidity. At the center, a pair of Timken Fafnir 2MM210WI-DUL bearings mounted back-to-back permits axial float of the spindle to compensate for thermal changes.

The driving pulley shaft is rigidly supported by a widely spaced duplex pair of Timken Fafnir 2MM212WI-DUL preloaded bearings. All bearings are grease packed for life.

## ULTRA-LIGHT 2(3)MM9300WI (ISO 19) SERIES

### DIMENSIONAL SERIES METRIC

D

#### SUPER PRECISION MM:

Running accuracy and performance meet ABEC 9 (ISO P2) levels. Non-critical features conform to ABEC 7 (ISO P4) requirements.

#### WI CONSTRUCTION:

- Incorporates low shoulder on non-thrust side of outer rings.
- Maximum complement of balls separated by one-piece cage piloted against a ground thrust shoulder land of the outer ring.

<sup>(Ng)</sup> For a single, grease lubricated, spring preloaded bearing. This value to be used in permissible Operating Speed (Sp) calculation.

<sup>(1)</sup> Width tolerance of preloaded bearing set +0/-0.25 mm (+0/-0.010").

<sup>(2)</sup> ABMA STD 20 (r<sub>as</sub> max).

# BALL BEARINGS

## ULTRA-LIGHT 2(3)MM9300WI (ISO 19) SERIES

### DIMENSIONAL SERIES INCHES

D

### SUPER PRECISION MM:

Running accuracy and performance meet ABEC 9 (ISO P2) levels. Non-critical features conform to ABEC 7 (ISO P4) requirements.

### WI CONSTRUCTION:

- Incorporates low shoulder on non-thrust side of outer rings.
- Maximum complement of balls separated by one-piece cage piloted against a ground thrust shoulder land of the outer ring.

(N9) For a single, grease lubricated, spring preloaded bearing. This value to be used in permissible Operating Speed (Sp) calculation.

(1) Width tolerance of preloaded bearing set +0/-0.25 mm (+0/-0.010").

(2) ABMA STD 20 (r<sub>as</sub> max).

# BALL BEARINGS

## ULTRA-LIGHT 2(3)MMV9300HX (ISO 19) SERIES

### DIMENSIONAL SERIES METRIC

D

#### SUPER PRECISION MM:

Running accuracy and performance meet ABEC 9 (ISO P2) levels. Non-critical features conform to ABEC 7 (ISO P4) requirements.

#### WI CONSTRUCTION:

- Incorporates low shoulder on non-thrust side of outer rings.
- Maximum complement of balls separated by one-piece cage piloted against a ground thrust shoulder land of the outer ring.

(N<sub>g</sub>) For a single, grease lubricated, spring preloaded bearing. This value to be used in permissible Operating Speed (Sp) calculation.

(1) Width tolerance of preloaded bearing set +0/-0.25 mm (+0/-0.010").

(2) ABMA STD 20 (r<sub>as</sub> max).

# BALL BEARINGS

## ULTRA-LIGHT 2(3)MMV9300HX (ISO 19) SERIES

### DIMENSIONAL SERIES INCHES

D

### SUPER PRECISION MM:

Running accuracy and performance meet ABEC 9 (ISO P2) levels. Non-critical features conform to ABEC 7 (ISO P4) requirements.

### WI CONSTRUCTION:

- Incorporates low shoulder on non-thrust side of outer rings.
- Maximum complement of balls separated by one-piece cage piloted against a ground thrust shoulder land of the outer ring.

(N9) For a single, grease lubricated, spring preloaded bearing. This value to be used in permissible Operating Speed (Sp) calculation.

(1) Width tolerance of preloaded bearing set +0/-0.25 mm (+0/-0.010").

(2) ABMA STD 20 (r<sub>as</sub> max).

<sup>(1)</sup> For other mounting arrangement configurations refer to the engineering section on Permissible Speed calculation methods.

<sup>(2)</sup> For ceramic ball complements use 120% of speeds shown.

# BALL BEARINGS

## EXTRA-LIGHT 2(3)MMV99100WN (ISO 10) SERIES

### DIMENSIONAL SERIES METRIC

D

#### SUPER PRECISION MM:

Running accuracy and performance meet ABEC 9 (ISO P2) levels. Non-critical features conform to ABEC 7 (ISO P4) requirements.

#### WN CONSTRUCTION:

- Incorporates low shoulder on non-thrust side of outer and inner rings.
- Maximum complement of balls separated by one-piece cage piloted against a ground thrust shoulder land of the outer ring.

(N<sub>g</sub>) For a single, grease lubricated, spring preloaded bearing. This value to be used in permissible Operating Speed (Sp) calculation.

<sup>(1)</sup> Width tolerance of preloaded bearing set +0/-0.25 mm (+0/-0.010").

<sup>(2)</sup> ABMA STD 20 (r<sub>as</sub> max).

# BALL BEARINGS

## EXTRA-LIGHT 2(3)MMV99100WN (ISO 10) SERIES

### DIMENSIONAL SERIES INCHES

D

#### SUPER PRECISION MM:

Running accuracy and performance meet ABEC 9 (ISO P2) levels. Non-critical features conform to ABEC 7 (ISO P4) requirements.

#### WN CONSTRUCTION:

- Incorporates low shoulder on non-thrust side of outer and inner rings.
- Maximum complement of balls separated by one-piece cage piloted against a ground thrust shoulder land of the outer ring.

(N9) For a single, grease lubricated, spring preloaded bearing. This value to be used in permissible Operating Speed (Sp) calculation.

(1) Width tolerance of preloaded bearing set +0/-0.25 mm (+0/-0.010").

(2) ABMA STD 20 (r<sub>as</sub> max).

<sup>(1)</sup> For other mounting arrangement configurations refer to the engineering section on Permissible Speed calculation methods.

<sup>(2)</sup> For ceramic ball complements use 120% of speeds shown.

## BALL BEARINGS

### ULTRA-LIGHT MM9100K (ISO 10) SERIES

#### DIMENSIONAL SIZES METRIC

#### SUPER PRECISION MM:

Running accuracy and performance meet ABEC 9 (ISO P2) levels. Non-critical features conform to ABEC 7 (ISO P4) requirements.

#### CONRAD CONSTRUCTION:

- Maximum complement of balls separated by two-piece land piloted cage

(N<sub>g</sub>) For a single, grease lubricated, spring preloaded bearing. This value to be used in permissible Operating Speed (S<sub>p</sub>) calculation.

<sup>(1)</sup> Width tolerance of preloaded bearing set +0/-0.25 mm (+0/-0.010").

<sup>(2)</sup> ABMA STD 20 (r<sub>as</sub> max).

# BALL BEARINGS

## EXTRA-LIGHT MM9100K (ISO 10) SERIES

### DIMENSIONAL SIZES INCHES

#### SUPER PRECISION MM:

Running accuracy and performance meet ABEC 9 (ISO P2) levels. Non-critical features conform to ABEC 7 (ISO P4) requirements.

#### CONRAD CONSTRUCTION:

- Maximum complement of balls separated by two-piece land piloted cage.

(N<sub>g</sub>) For a single, grease lubricated, spring preloaded bearing. This value to be used in permissible Operating Speed (S<sub>p</sub>) calculation.

<sup>(1)</sup> Width tolerance of preloaded bearing set +0/-0.25 mm (+0/-0.010").

<sup>(2)</sup> ABMA STD 20 (r<sub>as</sub> max).

# BALL BEARINGS

## LIGHT 2(3)MM200WI (ISO 02) SERIES

### DIMENSIONAL SERIES METRIC

D

#### SUPER PRECISION MM:

Running accuracy and performance meet ABEC 9 (ISO P2) levels. Non-critical features conform to ABEC 7 (ISO P4) requirements.

#### WI CONSTRUCTION:

- Incorporates low shoulder on non-thrust side of outer rings.
- Maximum complement of balls separated by one-piece cage piloted against a ground thrust shoulder land of the outer ring.

(Ng) For a single, grease lubricated, spring preloaded bearing. This value to be used in permissible Operating Speed (Sp) calculation.

(1) Width tolerance of preloaded bearing set +0/-0.25 mm (+0/-0.010").

(2) ABMA STD 20 (r<sub>as</sub> max).

# BALL BEARINGS

## LIGHT 2(3)MM200WI (ISO 02) SERIES

### DIMENSIONAL SERIES INCHES

D

#### SUPER PRECISION MM:

Running accuracy and performance meet ABEC 9 (ISO P2) levels. Non-critical features conform to ABEC 7 (ISO P4) requirements.

#### WI CONSTRUCTION:

- Incorporates low shoulder on non-thrust side of outer rings.
- Maximum complement of balls separated by one-piece cage piloted against a ground thrust shoulder land of the outer ring.

(N<sub>g</sub>) For a single, grease lubricated, spring preloaded bearing. This value to be used in permissible Operating Speed (Sp) calculation.

(1) Width tolerance of preloaded bearing set +0/-0.25 mm (+0/-0.010").

(2) ABMA STD 20 (r<sub>as</sub> max).

<sup>(1)</sup> For other mounting arrangement configurations refer to the engineering section on Permissible Speed calculation methods.

<sup>(2)</sup> For ceramic ball complements use 120% of speeds shown.

## BALL BEARINGS

### LIGHT MM200K (ISO 02) SERIES

#### DIMENSIONAL SIZES METRIC

#### SUPER PRECISION MM:

Running accuracy and performance meet ABEC 9 (ISO P2) levels. Non-critical features conform to ABEC 7 (ISO P4) requirements.

#### CONRAD CONSTRUCTION:

- Maximum complement of balls separated by two-piece land piloted cage.

<sup>(Ng)</sup> For a single, grease lubricated, spring preloaded bearing. This value to be used in permissible Operating Speed (Sp) calculation.

<sup>(1)</sup> Width tolerance of preloaded bearing set +0/-0.25 mm (+0/-0.010").

<sup>(2)</sup> ABMA STD 20 (r<sub>as</sub> max).

## BALL BEARINGS

### LIGHT MM200K (ISO 02) SERIES

#### DIMENSIONAL SIZES INCHES

#### SUPER PRECISION MM:

Running accuracy and performance meet ABEC 9 (ISO P2) levels. Non-critical features conform to ABEC 7 (ISO P4) requirements.

#### CONRAD CONSTRUCTION:

- Maximum complement of balls separated by two-piece land piloted cage.

<sup>(N<sub>9</sub>)</sup> For a single, grease lubricated, spring preloaded bearing. This value to be used in permissible Operating Speed (Sp) calculation.

<sup>(1)</sup> Width tolerance of preloaded bearing set +0/-0.25 mm (+0/-0.010").

<sup>(2)</sup> ABMA STD 20 (r<sub>as</sub> max).

D

# BALL BEARINGS

## MEDIUM 2(3)MM300WI (ISO 03) SERIES

### DIMENSIONAL SERIES METRIC

D

#### SUPER PRECISION MM:

Running accuracy and performance meet ABEC 9 (ISO P2) levels. Non-critical features conform to ABEC 7 (ISO P4) requirements.

#### WI CONSTRUCTION:

- Incorporates low shoulder on non-thrust side of outer rings.
- Maximum complement of balls separated by one-piece cage piloted against a ground thrust shoulder land of the outer ring.

# BALL BEARINGS

## MEDIUM 2(3)MM300WI (ISO 03) SERIES

### DIMENSIONAL SERIES INCHES

D

#### SUPER PRECISION MM:

Running accuracy and performance meet ABEC 9 (ISO P2) levels. Non-critical features conform to ABEC 7 (ISO P4) requirements.

#### WI CONSTRUCTION:

- Incorporates low shoulder on non-thrust side of outer rings.
- Maximum complement of balls separated by one-piece cage piloted against a ground thrust shoulder land of the outer ring.

<sup>(Ng)</sup> For a single, grease lubricated, spring preloaded bearing. This value to be used in permissible Operating Speed (Sp) calculation.

<sup>(1)</sup> Width tolerance of preloaded bearing set +0/-0.25 mm (+0/-0.010").

<sup>(2)</sup> ABMA STD 20 (r<sub>as</sub> max).

<sup>(1)</sup> For other mounting arrangement configurations refer to the engineering section on Permissible Speed calculation methods.

<sup>(2)</sup> For ceramic ball complements use 120% of speeds shown.

# BALL BEARINGS

## MEDIUM MM300K (ISO 03) SERIES

### DIMENSIONAL SIZES METRIC / INCH

#### SUPER PRECISION MM:

Running accuracy and performance meet ABEC 9 (ISO P2) levels. Non-critical features conform to ABEC 7 (ISO P4) requirements.

#### CONRAD CONSTRUCTION:

- Maximum complement of balls separated by two-piece land piloted cage.

# BALL BEARINGS

## BALL SCREW SUPPORT SERIES

### DIMENSIONAL SIZES – METRIC SERIES (METRIC UNITS)

- Designed for maximum axial rigidity, low drag torque, and extreme control of lateral eccentricity.
- Manufactured to ABEC 9 axial tolerances.
- Nonseparable angular-contact type design (60° contact angle).
- Manufactured to ABEC 7 radial and envelope tolerances.
- Maximum complement of balls.
- Supplied prelubricated with heavy-duty grease NLGI #2.
- Packaged in DB arrangement [can be mounted in duplexed pairs and in multiplexed sets in either Back-to-Back (DB), Face-to-Face (DF) or Tandem (DT) arrangements].

(1) Width tolerance of preloaded bearing set +0/-0.25 mm (+0/-0.010").

(2) ABMA STD 20 (r<sub>as</sub> max).

## BALL SCREW SUPPORT SERIES

### DIMENSIONAL SIZES – METRIC SERIES (INCH UNITS)

- Designed for maximum axial rigidity, low drag torque, and extreme control of lateral eccentricity.
- Manufactured to ABEC 9 axial tolerances.
- Nonseparable angular-contact type design (60° contact angle).
- Manufactured to ABEC 7 radial and envelope tolerances.
- Maximum complement of balls.
- Supplied prelubricated with heavy-duty grease NLGI #2.
- Packaged in DB arrangement [can be mounted in duplexed pairs and in multiplexed sets in either Back-to-Back (DB), Face-to-Face (DF) or Tandem (DT) arrangements].

<sup>(1)</sup>Width tolerance of preloaded bearing set +0/-0.25 mm (+0/-0.010").

<sup>(2)</sup>ABMA STD 20 (r<sub>as</sub> max).

<sup>(3)</sup>Single bearing.

# BALL BEARINGS

## BALL SCREW SUPPORT SERIES

### DIMENSIONAL SIZES – INCH SERIES

- Designed for maximum axial rigidity, low drag torque, and extreme control of lateral eccentricity.
- Manufactured to ABEC 9 axial tolerances.
- Nonseparable angular-contact type design (60° contact angle).
- Manufactured to ABEC 7 radial and envelope tolerances.
- Maximum complement of balls.
- Supplied prelubricated with heavy-duty grease NLGI #2.
- Packaged in DB arrangement [can be mounted in duplexed pairs and in multiplexed sets in either Back-to-Back (DB), Face-to-Face (DF) or Tandem (DT) arrangements].

(1) Width tolerance of preloaded bearing set +0/-0.25 mm (+0/-0.010").

(2) Refer to engineering section for width tolerance of preloaded ball screw support bearings.

(3) ABMA Std. 20 (r<sub>as</sub> max).

(4) Single bearing.

(1) Based on 1500 hours L<sub>10</sub> life and permissible speed.

(2) Heavy preload is standard.

(3) Data presented is for a single bearing in a DUH set and for two bearings in a QUH set mounted DB or DF.

(1) Based on 1500 hours L<sub>10</sub> life and permissible speed.

(2) Heavy preload is standard.

(3) Data presented is for a single bearing in a DUH set and for two bearings in a QUH set mounted DB or DF.

D

# BALL BEARINGS

## BSBU D

### STANDARD AND HEAVY-DUTY BEARINGS

- Designed and developed to give the machine manufacturer a ready-made unit providing excellent stiffness and accuracy in ball screw applications.
- Units combine the features of MM-BS-DU (Duplex) ball screw bearings with an accurately manufactured housing and laminar ring seals.
- Each unit is prepacked with a measured quantity of high quality bearing grease and requires no further lubrication.
- Units are supplied with the bearings in pairs mounted in the "DB" ("O") arrangement.
- Other bearing arrangements can be accommodated if required. Please consult your Timken representative with details of your requirements or for suggested shaft and housing fits.

## BSBU Q

### STANDARD AND HEAVY-DUTY BEARINGS

- Similar in design and features to the series BSBU D except MM-BS-QU Quadruplex bearings are used.
- Units are supplied with the bearings in quad sets mounted in the "DB" ("O") arrangement.
- Consult your Timken representative for suggested shaft.

# BALL BEARINGS

## BSPB D

### STANDARD AND HEAVY-DUTY BEARINGS

- Design of bearing pillow block unit for ball screw applications.
- Incorporates similar features to the series BSBU D but is designed to bolt down onto a flat surface, parallel to the ball screw axis.
- In the standard unit, pilot holes for dowels are provided.
- Units with finished holes for dowels can be supplied by special order if required.
- Consult your Timken representative for suggested shaft.

### STANDARD SERIES – DIMENSIONAL TOLERANCES $\pm .13$ mm ( $\pm 0.005$ ") UNLESS OTHERWISE STATED.

## BSPB Q BALL SCREW SUPPORT BEARING PILLOW BLOCK UNITS

- Similar in design and features to the Series BSPB D, except MM-BS-QU quadropex bearings are used.
- Units are supplied with the bearings in quad sets mounted in the "DB" ("O") arrangement.
- Consult your Timken representative for suggested shaft fits.

STANDARD SERIES – DIMENSIONAL TOLERANCES ±.13 mm (± 0.005") UNLESS OTHERWISE STATED.

D

## BALL BEARINGS

### EX-CELL-O SPINDLE BEARINGS

- “EX” Series (Timken® Fafnir® WI construction) designed to meet Ex-Cell-O replacement requirements for inch nominal spindles with bore and O.D. tolerances nominal to plus.
- “XWO” Series (Timken Fafnir WO separable construction) designed to meet Ex-Cell-O replacement requirements for inch nominal spindles with bore and O.D. tolerances nominal to minus.
- Measurement of shafts and housings (or reconditioning of parts) should determine replacement bearing style.
- Shafts and housings should be checked (and reworked) to avoid improper shaft and housing fits.
- Preload selection should be based on operating speed and lubrication system of spindle.
