(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and C<sub>a90</sub> are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

(4) These maximum fillet radii will be cleared by the bearing corners.

(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

| Bearing          |                  |                  | Dimensions, mm (inches)                        |                                            |                                            |                                              |                |                | Cage           |                | Factors        |                |                | Weight<br>kg (lbs.) |

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and C<sub>a90</sub> are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

(4) These maximum fillet radii will be cleared by the bearing corners.

(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and C<sub>a90</sub> are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

(4) These maximum fillet radii will be cleared by the bearing corners.

(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.

<sup>(8)</sup> Pin-type cage. Please consult The Timken Company.

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.  
(2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $C_{a90}$  are radial and thrust values.  
(3) Negative value indicates effective center inside cone backface.  
(4) These maximum fillet radii will be cleared by the bearing corners.  
(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.

<sup>(8)</sup> Pin-type cage. Please consult The Timken Company.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and C<sub>a90</sub> are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

(4) These maximum fillet radii will be cleared by the bearing corners.

(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.

<sup>(8)</sup> Pin-type cage. Please consult The Timken Company.

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.

(2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $C_{a90}$  are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

(4) These maximum fillet radii will be cleared by the bearing corners.

(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.

<sup>(8)</sup> Pin-type cage. Please consult The Timken Company.

(1) Based on  $1 \times 10^6$  revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on  $90 \times 10^6$  revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and C<sub>a90</sub> are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

(4) These maximum fillet radii will be cleared by the bearing corners.

(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.

<sup>(8)</sup> Pin-type cage. Please consult The Timken Company.

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.

(2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $C_{a90}$  are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

(4) These maximum fillet radii will be cleared by the bearing corners.

(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

| Bearing          |                  |                  | Dimensions, mm (inches)                        |                                            |                                            |                                              |                |                | Cage           |                | Factors        |                |                | Weight<br>kg (lbs.) |

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.

(2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $C_{a90}$  are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

(4) These maximum fillet radii will be cleared by the bearing corners.

(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

| Bearing          |                  |                  | Dimensions, mm (inches)                        |                                            |                                            |                                              |                |                | Cage           |                | Factors        |                |                | Weight<br>kg (lbs.) |

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.

(2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $C_{a90}$  are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

(4) These maximum fillet radii will be cleared by the bearing corners.

(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.

(2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $C_{a90}$  are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

(4) These maximum fillet radii will be cleared by the bearing corners.

(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.  
 (2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $C_{a90}$  are radial and thrust values.  
 (3) Negative value indicates effective center inside cone backface.  
 (4) These maximum fillet radii will be cleared by the bearing corners.  
 (5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.

(2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $C_{a90}$  are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

(4) These maximum fillet radii will be cleared by the bearing corners.

(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

| Bearing |        |                  | Dimensions, mm (inches)                        |                                            |                                            |                                              |                |                | Cage           |                | Factors        |                |                | Weight<br>kg (lbs.) |

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.

(2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $C_{a90}$  are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

(4) These maximum fillet radii will be cleared by the bearing corners.

(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and C<sub>a90</sub> are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

(4) These maximum fillet radii will be cleared by the bearing corners.

(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.

(2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $C_{a90}$  are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

(4) These maximum fillet radii will be cleared by the bearing corners.

(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.  
(2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $C_{a90}$  are radial and thrust values.  
(3) Negative value indicates effective center inside cone backface.  
(4) These maximum fillet radii will be cleared by the bearing corners.  
(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.

<sup>(8)</sup> Pin-type cage. Please consult The Timken Company.

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.  
 (2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $C_{a90}$  are radial and thrust values.  
 (3) Negative value indicates effective center inside cone backface.  
 (4) These maximum fillet radii will be cleared by the bearing corners.  
 (5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and C<sub>a90</sub> are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

(4) These maximum fillet radii will be cleared by the bearing corners.

(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

| Bearing          |                  |                  | Dimensions, mm (inches)                        |                                            |                                            |                                              |                |                | Cage           |                | Factors        |                |                | Weight<br>kg (lbs.) |

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.

(2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $C_{a90}$  are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

(4) These maximum fillet radii will be cleared by the bearing corners.

(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.

(2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $C_{a90}$  are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

(4) These maximum fillet radii will be cleared by the bearing corners.

(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

| Bearing          |                  |                  | Dimensions, mm (inches)    |                                   |                          |                                     |                |                | Cage           |                | Factors        |                |                | Weight<br>kg (lbs.) |

(1) Based on  $1 \times 10^6$  revolutions L<sub>10</sub> life, for the ISO life calculation method.  
 (2) Based on  $90 \times 10^6$  revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and C<sub>a90</sub> are radial and thrust values.  
 (3) Negative value indicates effective center inside cone backface.  
 (4) These maximum fillet radii will be cleared by the bearing corners.  
 (5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.

(2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $C_{a90}$  are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

(4) These maximum fillet radii will be cleared by the bearing corners.

(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and C<sub>a90</sub> are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

(4) These maximum fillet radii will be cleared by the bearing corners.

(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

| Bearing |        |                  | Dimensions, mm (inches)                        |                                            |                                            |                                              |                |                | Cage           |                | Factors        |                |                | Weight<br>kg (lbs.) |

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.  
(2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $C_{a90}$  are radial and thrust values.  
(3) Negative value indicates effective center inside cone backface.  
(4) These maximum fillet radii will be cleared by the bearing corners.  
(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.  
(2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $C_{a90}$  are radial and thrust values.  
(3) Negative value indicates effective center inside cone backface.  
(4) These maximum fillet radii will be cleared by the bearing corners.  
(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.

(2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $C_{a90}$  are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

(4) These maximum fillet radii will be cleared by the bearing corners.

(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

| Bearing |        |                  | Dimensions, mm (inches)                        |                                            |                                            |                                              |                |                | Cage           |                | Factors        |                |                | Weight<br>kg (lbs.) |

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.

(2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $C_{a90}$  are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

(4) These maximum fillet radii will be cleared by the bearing corners.

(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.

<sup>(8)</sup> Pin-type cage. Please consult The Timken Company.

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.

(2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $C_{a90}$  are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

(4) These maximum fillet radii will be cleared by the bearing corners.

(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.

(2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $C_{a90}$  are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

(4) These maximum fillet radii will be cleared by the bearing corners.

(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.  
(2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $C_{a90}$  are radial and thrust values.  
(3) Negative value indicates effective center inside cone backface.  
(4) These maximum fillet radii will be cleared by the bearing corners.  
(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.

<sup>(8)</sup> Pin-type cage. Please consult The Timken Company.

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.  
 (2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $C_{a90}$  are radial and thrust values.  
 (3) Negative value indicates effective center inside cone backface.  
 (4) These maximum fillet radii will be cleared by the bearing corners.  
 (5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and C<sub>a90</sub> are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

(4) These maximum fillet radii will be cleared by the bearing corners.

(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

| Bearing          |                  |                  | Dimensions, mm (inches)                        |                                            |                                            |                  |                |                |                | Cage           |                |                | Factors        |                |  | Weight<br>kg (lbs.) |

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.

<sup>(8)</sup> Pin-type cage. Please consult The Timken Company.

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.

(2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $C_{a90}$  are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

(4) These maximum fillet radii will be cleared by the bearing corners.

(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

| Bearing          |                  |                  | Dimensions, mm (inches)                        |                                            |                                            |                                              |                |                | Cage           |                | Factors        |                |                | Weight<br>kg (lbs.) |

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.  
(2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $C_{a90}$  are radial and thrust values.  
(3) Negative value indicates effective center inside cone backface.  
(4) These maximum fillet radii will be cleared by the bearing corners.  
(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

(1) Based on  $1 \times 10^6$  revolutions L<sub>10</sub> life, for the ISO life calculation method.  
(2) Based on  $90 \times 10^6$  revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and C<sub>a90</sub> are radial and thrust values.  
(3) Negative value indicates effective center inside cone backface.  
(4) These maximum fillet radii will be cleared by the bearing corners.  
(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.

<sup>(8)</sup> Pin-type cage. Please consult The Timken Company.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and C<sub>a90</sub> are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

(4) These maximum fillet radii will be cleared by the bearing corners.

(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.  
 (2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and C<sub>a90</sub> are radial and thrust values.  
 (3) Negative value indicates effective center inside cone backface.  
 (4) These maximum fillet radii will be cleared by the bearing corners.  
 (5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

| Bearing          |                  |                  | Dimensions, mm (inches)                        |                                            |                                            |                                              |                |                | Cage           |                | Factors        |                |                | Weight<br>kg (lbs.) |

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and C<sub>a90</sub> are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

(4) These maximum fillet radii will be cleared by the bearing corners.

(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.

<sup>(8)</sup> Pin-type cage. Please consult The Timken Company.

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.  
(2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $C_{a90}$  are radial and thrust values.  
(3) Negative value indicates effective center inside cone backface.  
(4) These maximum fillet radii will be cleared by the bearing corners.  
(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.  
 (2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $C_{a90}$  are radial and thrust values.  
 (3) Negative value indicates effective center inside cone backface.  
 (4) These maximum fillet radii will be cleared by the bearing corners.  
 (5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and C<sub>a90</sub> are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

(4) These maximum fillet radii will be cleared by the bearing corners.

(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.

<sup>(8)</sup> Pin-type cage. Please consult The Timken Company.

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.

(2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $C_{a90}$  are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

(4) These maximum fillet radii will be cleared by the bearing corners.

(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

| Bearing          |                  |                  | Dimensions, mm (inches)                        |                                            |                                            |                  |                |                | Cage           |                | Factors        |                |                | Weight<br>kg (lbs.) |

(1) Based on  $1 \times 10^6$  revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on  $90 \times 10^6$  revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and C<sub>a90</sub> are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

(4) These maximum fillet radii will be cleared by the bearing corners.

(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and C<sub>a90</sub> are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

(4) These maximum fillet radii will be cleared by the bearing corners.

(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

| Bearing           |                  |                  | Dimensions, mm (inches)                        |                                            |                                            |                                              |                |                | Cage           |                | Factors        |                |                | Weight<br>kg (lbs.) |

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.  
 (2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $C_{a90}$  are radial and thrust values.  
 (3) Negative value indicates effective center inside cone backface.  
 (4) These maximum fillet radii will be cleared by the bearing corners.  
 (5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and C<sub>a90</sub> are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

(4) These maximum fillet radii will be cleared by the bearing corners.

(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.

<sup>(8)</sup> Pin-type cage. Please consult The Timken Company.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and C<sub>a90</sub> are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

(4) These maximum fillet radii will be cleared by the bearing corners.

(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

| Bearing           |                  |                  | Dimensions, mm (inches)                        |                                            |                                            |                                              |                |                | Cage           |                | Factors        |                |                | Weight<br>kg (lbs.) |

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.

<sup>(8)</sup> Pin-type cage. Please consult The Timken Company.

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.  
 (2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $C_{a90}$  are radial and thrust values.  
 (3) Negative value indicates effective center inside cone backface.  
 (4) These maximum fillet radii will be cleared by the bearing corners.  
 (5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.

(2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $C_{a90}$  are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

(4) These maximum fillet radii will be cleared by the bearing corners.

(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and C<sub>a90</sub> are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

(4) These maximum fillet radii will be cleared by the bearing corners.

(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

| Bearing           |                  |                  | Dimensions, mm (inches)                        |                                            |                                            |                                              |                |                | Cage           |                | Factors        |                |                | Weight<br>kg (lbs.) |

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.  
 (2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $C_{a90}$  are radial and thrust values.  
 (3) Negative value indicates effective center inside cone backface.  
 (4) These maximum fillet radii will be cleared by the bearing corners.  
 (5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.

<sup>(8)</sup> Pin-type cage. Please consult The Timken Company.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and C<sub>a90</sub> are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

(4) These maximum fillet radii will be cleared by the bearing corners.

(5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

| Bearing           |                   |                  | Dimensions, mm (inches)                        |                                            |                                            |                                              |                |                | Cage           |                | Factors        |                |                | Weight<br>kg (lbs.) |

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.

<sup>(8)</sup> Pin-type cage. Please consult The Timken Company.

- (1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.
- (2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $C_{a90}$  are radial and thrust values.
- (3) Negative value indicates effective center inside cone backface.
- (4) These maximum fillet radii will be cleared by the bearing corners.
- (5) These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.

<sup>(8)</sup> Pin-type cage. Please consult The Timken Company.

**If you need a product other than those shown here,  
please contact your Timken representative.**

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and C<sub>a90</sub> are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

<sup>(4)</sup> These maximum fillet radii will be cleared by the bearing corners.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.

(2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $C_{a90}$  are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

<sup>(4)</sup> These maximum fillet radii will be cleared by the bearing corners.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and C<sub>a90</sub> are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

<sup>(4)</sup> These maximum fillet radii will be cleared by the bearing corners.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and C<sub>a90</sub> are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

<sup>(4)</sup> These maximum fillet radii will be cleared by the bearing corners.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and C<sub>a90</sub> are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

<sup>(4)</sup> These maximum fillet radii will be cleared by the bearing corners.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.

(2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $C_{a90}$  are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

<sup>(4)</sup> These maximum fillet radii will be cleared by the bearing corners.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and C<sub>a90</sub> are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

<sup>(4)</sup> These maximum fillet radii will be cleared by the bearing corners.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and C<sub>a90</sub> are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

<sup>(4)</sup> These maximum fillet radii will be cleared by the bearing corners.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and C<sub>a90</sub> are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

<sup>(4)</sup> These maximum fillet radii will be cleared by the bearing corners.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and C<sub>a90</sub> are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

<sup>(4)</sup> These maximum fillet radii will be cleared by the bearing corners.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and C<sub>a90</sub> are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

<sup>(4)</sup> These maximum fillet radii will be cleared by the bearing corners.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and C<sub>a90</sub> are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

<sup>(4)</sup> These maximum fillet radii will be cleared by the bearing corners.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and C<sub>a90</sub> are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

<sup>(4)</sup> These maximum fillet radii will be cleared by the bearing corners.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and C<sub>a90</sub> are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

<sup>(4)</sup> These maximum fillet radii will be cleared by the bearing corners.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and C<sub>a90</sub> are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

<sup>(4)</sup> These maximum fillet radii will be cleared by the bearing corners.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and C<sub>a90</sub> are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

<sup>(4)</sup> These maximum fillet radii will be cleared by the bearing corners.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and C<sub>a90</sub> are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

<sup>(4)</sup> These maximum fillet radii will be cleared by the bearing corners.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and C<sub>a90</sub> are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

<sup>(4)</sup> These maximum fillet radii will be cleared by the bearing corners.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and C<sub>a90</sub> are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

<sup>(4)</sup> These maximum fillet radii will be cleared by the bearing corners.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and C<sub>a90</sub> are radial and thrust values.

(3) Negative value indicates effective center inside cone backface.

<sup>(4)</sup> These maximum fillet radii will be cleared by the bearing corners.  
<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.  
<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

## TDO DOUBLE OUTER RACE

### TAPERED ROLLER BEARINGS

- TDO consists of a single piece (double) outer race and two single inner races.
- Configuration offers a wide effective bearing spread to support loads created by overturning moments.
- Bearings can be used at fixed positions or allowed to float in the housing bore to compensate for shaft expansion.

|           |                                                                                                                                                                                                                                                                                                                                                        |
|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>D</b>  | CD suffix now replaces the D suffix listed for part numbers in previous publications.<br>A groove with oil holes is provided for lubrication in suffix outer race.                                                                                                                                                                                     |
| <b>CD</b> | Outer races can be pinned to prevent circumferential precession in the housing at floating positions (see the following tables for details).<br>This suffix in current part numbers now replaces the D and DC suffixes listed for part numbers in previous publications.<br>A groove with oil holes is provided for lubrication in suffix outer races. |
| <b>DC</b> | Can be pinned to prevent circumferential precession in the housing at floating positions (see the following tables for details).<br>Outer races have one lubricant hole. Normally, these are used at floating positions with a fixing pin.                                                                                                             |

- TDO bearings are usually supplied complete with an inner race spacer as a pre-set assembly.
- To suit the application duty, the built-in setting value needs to be established by your Timken representative before an order is placed.
- The tables list part numbers of plain-ring spacers.
- If a spacer with provision for lubricant passage is required, consult your Timken representative.
- To place an order or obtain a price quotation, specify the bearing and spacer part number.

Example:  $\frac{\text{inner race}}{\text{A2047}} - \frac{\text{outer race}}{\text{A2120D}}$   
R80003 spacer

- Double outer race can be used with any single race from the same 'series.'
- The tables list regularly specified inner race part numbers.
- Please consult a Timken representative for more information.

#### BEARING DATA TABLES

In the following bearing data tables, part numbers are listed in ascending order of bore, outside diameter and width.

Bearing ratings shown in tables are based on environmental reference conditions. Effects of known operating conditions on bearing performance in an application should be investigated before final bearing selection is made.

Approximate mass is listed for every part number. For weight-critical applications or exact freight cost evaluation purposes, a more accurate value should be obtained from your Timken representative.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and Ca<sub>90</sub> are radial and thrust values for a single-row, C<sub>90(2)</sub> is the two-row radial value.

(3) These maximum fillet radii will be cleared by the bearing corners.

(4) If a spacer with provision for lubricant passage is required, consult your Timken representative.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.

(2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $Ca_{90}$  are radial and thrust values for a single-row,  $C_{90(2)}$  is the two-row radial value.

(3) These maximum fillet radii will be cleared by the bearing corners.

(4) If a spacer with provision for lubricant passage is required, consult your Timken representative.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.

(2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $Ca_{90}$  are radial and thrust values for a single-row,  $C_{90(2)}$  is the two-row radial value.

(3) These maximum fillet radii will be cleared by the bearing corners.

(4) If a spacer with provision for lubricant passage is required, consult your Timken representative.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and Ca<sub>90</sub> are radial and thrust values for a single-row, C<sub>90(2)</sub> is the two-row radial value.

(3) These maximum fillet radii will be cleared by the bearing corners.

(4) If a spacer with provision for lubricant passage is required, consult your Timken representative.

| Part Number |         |                       | Dimensions, mm (inches)                        |                                            |                                                  |                                            | Pin            |                | Factors        |                |                | Weight<br>kg (lbs.) |

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.  
 (2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and Ca<sub>90</sub> are radial and thrust values for a single-row, C<sub>90(2)</sub> is the two-row radial value.  
 (3) These maximum fillet radii will be cleared by the bearing corners.  
 (4) If a spacer with provision for lubricant passage is required, consult your Timken representative.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and C<sub>90</sub> are radial and thrust values for a single-row, C<sub>90(2)</sub> is the two-row radial value.

(3) These maximum fillet radii will be cleared by the bearing corners.

(4) If a spacer with provision for lubricant passage is required, consult your Timken representative.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and Ca<sub>90</sub> are radial and thrust values for a single-row, C<sub>90(2)</sub> is the two-row radial value.

(3) These maximum fillet radii will be cleared by the bearing corners.

(4) If a spacer with provision for lubricant passage is required, consult your Timken representative.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and Ca<sub>90</sub> are radial and thrust values for a single-row, C<sub>90(2)</sub> is the two-row radial value.

(3) These maximum fillet radii will be cleared by the bearing corners.

(4) If a spacer with provision for lubricant passage is required, consult your Timken representative.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.  
 (2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $Ca_{90}$  are radial and thrust values for a single-row,  $C_{90(2)}$  is the two-row radial value.  
 (3) These maximum fillet radii will be cleared by the bearing corners.  
 (4) If a spacer with provision for lubricant passage is required, consult your Timken representative.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and Ca<sub>90</sub> are radial and thrust values for a single-row, C<sub>90(2)</sub> is the two-row radial value.

(3) These maximum fillet radii will be cleared by the bearing corners.

(4) If a spacer with provision for lubricant passage is required, consult your Timken representative.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.

(2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $Ca_{90}$  are radial and thrust values for a single-row,  $C_{90(2)}$  is the two-row radial value.

(3) These maximum fillet radii will be cleared by the bearing corners.

(4) If a spacer with provision for lubricant passage is required, consult your Timken representative.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.  
 (2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and Ca<sub>90</sub> are radial and thrust values for a single-row, C<sub>90(2)</sub> is the two-row radial value.  
 (3) These maximum fillet radii will be cleared by the bearing corners.  
 (4) If a spacer with provision for lubricant passage is required, consult your Timken representative.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.  
 (2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $C_{90}$  are radial and thrust values for a single-row,  $C_{90(2)}$  is the two-row radial value.  
 (3) These maximum fillet radii will be cleared by the bearing corners.  
 (4) If a spacer with provision for lubricant passage is required, consult your Timken representative.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and Ca<sub>90</sub> are radial and thrust values for a single-row, C<sub>90(2)</sub> is the two-row radial value.

(3) These maximum fillet radii will be cleared by the bearing corners.

(4) If a spacer with provision for lubricant passage is required, consult your Timken representative.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and Ca<sub>90</sub> are radial and thrust values for a single-row, C<sub>90(2)</sub> is the two-row radial value.

(3) These maximum fillet radii will be cleared by the bearing corners.

(4) If a spacer with provision for lubricant passage is required, consult your Timken representative.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.  
 (2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $Ca_{90}$  are radial and thrust values for a single-row,  $C_{90(2)}$  is the two-row radial value.  
 (3) These maximum fillet radii will be cleared by the bearing corners.  
 (4) If a spacer with provision for lubricant passage is required, consult your Timken representative.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and Ca<sub>90</sub> are radial and thrust values for a single-row, C<sub>90(2)</sub> is the two-row radial value.

(3) These maximum fillet radii will be cleared by the bearing corners.

(4) If a spacer with provision for lubricant passage is required, consult your Timken representative.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.

(2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $Ca_{90}$  are radial and thrust values for a single-row,  $C_{90(2)}$  is the two-row radial value.

(3) These maximum fillet radii will be cleared by the bearing corners.

(4) If a spacer with provision for lubricant passage is required, consult your Timken representative.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and Ca<sub>90</sub> are radial and thrust values for a single-row, C<sub>90(2)</sub> is the two-row radial value.

(3) These maximum fillet radii will be cleared by the bearing corners.

(4) If a spacer with provision for lubricant passage is required, consult your Timken representative.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.  
 (2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $Ca_{90}$  are radial and thrust values for a single-row,  $C_{90(2)}$  is the two-row radial value.  
 (3) These maximum fillet radii will be cleared by the bearing corners.  
 (4) If a spacer with provision for lubricant passage is required, consult your Timken representative.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and C<sub>90</sub> are radial and thrust values for a single-row, C<sub>90(2)</sub> is the two-row radial value.

(3) These maximum fillet radii will be cleared by the bearing corners.

(4) If a spacer with provision for lubricant passage is required, consult your Timken representative.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.

(2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $Ca_{90}$  are radial and thrust values for a single-row,  $C_{90(2)}$  is the two-row radial value.

(3) These maximum fillet radii will be cleared by the bearing corners.

(4) If a spacer with provision for lubricant passage is required, consult your Timken representative.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and Ca<sub>90</sub> are radial and thrust values for a single-row, C<sub>90(2)</sub> is the two-row radial value.

(3) These maximum fillet radii will be cleared by the bearing corners.

(4) If a spacer with provision for lubricant passage is required, consult your Timken representative.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.

(1) Based on 1 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for the ISO life calculation method.

(2) Based on 90 x 10<sup>6</sup> revolutions L<sub>10</sub> life, for The Timken Company life calculation method. C<sub>90</sub> and C<sub>90</sub> are radial and thrust values for a single-row, C<sub>90(2)</sub> is the two-row radial value.

(3) These maximum fillet radii will be cleared by the bearing corners.

(4) If a spacer with provision for lubricant passage is required, consult your Timken representative.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.

(1) Based on  $1 \times 10^6$  revolutions  $L_{10}$  life, for the ISO life calculation method.

(2) Based on  $90 \times 10^6$  revolutions  $L_{10}$  life, for The Timken Company life calculation method.  $C_{90}$  and  $Ca_{90}$  are radial and thrust values for a single-row,  $C_{90(2)}$  is the two-row radial value.

(3) These maximum fillet radii will be cleared by the bearing corners.

(4) If a spacer with provision for lubricant passage is required, consult your Timken representative.

<sup>(5)</sup> These factors apply for both inch and metric calculations. Consult your Timken representative for instruction on use.

<sup>(6)</sup> For standard class (4 or 2) only, the maximum metric value is a whole millimeter dimension.

<sup>(7)</sup> Compound radius on inner race. Details on drawing for bearing.
